John Tilton Esq
Dept Minister of Fisheries
Ottawa

Sir

Regarding the within letter from Wm Moore of Magog transferred here from your Dept. — I beg to state that a letter of like contents was received by me from Wm Moore on the 10th Inst. which I had supposed was forwarded to your Dept in my letter to you of 11th Inst: It appears however that this letter of 11th Inst was not laid on my desk — I now send it, as it will contain my views relative to the Enquiries made by Mr Moore for stocking his Hatchery with Fish —

I am of opinion that some improvements are necessary at the Magog Hatchery by which a larger and more certain supply of water could be obtained for feeding the breeding troughs for Salmon trout and the Automatic breeding jars for White fish —

Accounts Sept 21st/86

The Secretary
Dept of Marine & Fisheries
Ottawa

Sir,

Referring to the despatch of Attorney respecting Lobster Cove for the coming season I have to state that, the reports for setting these fish grounds are not encouraging. Recently mentioned in my letter of 20th Sept, that some action by the Fishermen of Tignish in removing their obstructions & "stakes" from the Bar of the Harbour by uniting to the Albany Club to obtain the exclusive right to the Harbour and to the Head Wharf at that place. Since the Fishermen have held meetings, discussing the matter with a view to some arrangement. Attorney there Expects some Settlement. Should no settlement be arrived at, little if any advantage can be placed upon their fishing grounds from the Wharf at Tignish Bay, in favour of the proprietors making there. The only advantage now, left, is the one to erect the

Lévisville Oct 27 1886

Wm Tilton Esq
Deputy Minister of Fisheries
Ottawa

Sir

Regarding Mr Venning's letter, a copy of which has been sent me from your Department, in the protection of salmon in the Nepisiguit River; and being requested to report thereon, I now beg to state as follows.

In the letter Mr Venning says "I was informed of the anticipated and most destructive way of getting one, for the Respect-der Fonnie Stone, by "stopping the parent Salmon from their "spawning beds, after they have run the "gauntlet of drift nets, off Bathurst, the "weirs in the Harbour of Bathurst, the nets "along the whole course of the Bathurst, "from the Harbour to the Grand Falls, and "the Spawning Beds of Whites, and Red Rocks from "the mouth of Nepisiguit to the Spawning "grounds on the departure." + - x

Here Sir Venning remarks about the destruction of Salmon, within the jurisdiction, and oversight of the New Brunswick Inspector; leads me to enquire into the Mills or the efforts whereby

made by that Officer "to prevent the wholesale poaching on the Belgique shore"

This unlawful and destructive course has been reported to me by Mr McCarthy, the duly appointed Fishery Overseer under Mr Fanning; and they also the efficiency in charge of the Schooner he has in the performance of this work, is the best evidence of the necessity for the immediate adoption of decisive measures to prevent the wholesale destruction of the young Salmon, & the continued practice of poaching, and destroying salmon at the spawning season, in the Bathurst and Belgique Rivers. Similar measures have also been embodied in the annual report made to you by myself and Mr McCarthy, and myself.

Regarding the anticipated and wanton destruction by killing Mrs. referred to in Mr Fanning's letter, Head Officer is principally to blame for its continuance, in forbidding, and discouraging the method I have endeavored to carry out for many years past; by obtaining the requisite supplies of parent Salmon from the Nets of the Nineteen fishermen of St John, in like manner as those fish are obtained in Scotland

Cascapedia, and Restigouche:

Mr Fanning having never admitted the propriety of the "anticipated and destructive" way of killing Mrs. which he has hitherto so strenuously upheld, since he first took the contract, although more than twenty years experience of pursuing similar systems as the other Hatcheries may also be adopted in the St John Rivers in the future.

Regarding the superior proficiency displayed by Mr McCarthy's officer as Special Overseer under the Act, since completed this work of destruction, Mr Fanning's own letter to the Hon. Provincial Secretary, dated 1st Nov. 1865, will be found to contain evidence of the most conclusive character, that Mr McCarthy employed on the Restigouche, was not only fully competent to pursue the most effective means for carrying out the intentions of the Act, but that he was also willing to do so, and that he did so, to the utmost of his ability, during the season of 1865, and that he was prevented from doing so in 1866 by Mr Fanning's refusal to allow him the necessary boat hands — It is not pretended that these men are in the habit of killing fish in the act of depositing their spawn, or that they destroy fish in the act of spawning, as it is alleged, was done by the Nineteen fishermen of St John, at their private fishing stations, for profit, by the wholesale

State, and consequently would [illegible]
would be the duty [illegible] Island Settlement
for sale.— Whilst [illegible] under the
of these prepared fish may be taken
by the more ignorant. [illegible] is not
the time when the [illegible]
is most required for [illegible]
fish is most wanted, however little
immediate advantage there may be in the
curing of it, great [illegible] may

Memorandum A 16/86

Hon Sir [illegible]
Dept Minister of Fisheries
Ottawa

Sir

Referring to your letter
of 13th inst beginning "Hon Mr Tilley
has proposed to obtain from
"Sea Coming Salmon Trout Ova from
"Collings Bay:— and also regarding
"Whitefish Ova, for Sandwich Hatching
House to state as follows:—
Having corresponded
with C. H. Gruchie relative to
making all preparation for taking
this Ova &c. &c in Collings Bay, in
readiness for operations of the
[illegible]— He replies that, the
"Nets are all ready but at that
"date, and that he may depend on
"having everything Satisfactory."
Mr Speechly
Having drawn the Officers
attention for making timely pre-
parations— He replies that, he
has to cruise Stoney Island; and
"that, Mr Gruchie has per[illegible]
[illegible]

"from Fishing Island if necessary
" But no arrangements have been
" made regarding the Bois Blanc
" Island fishery, as it was not yet
" known if the usual fish that station"

In connection with their
Society of procuring fish Eggs for
their autumn supplies for the
Several Hatcheries, I deem it that
Your Dept is in possession of the
following information

Mc-ke - Kenogamite Hatchery

"In addition to the Expected
supplies of Salmon-trout Ova,
referred to from Collingwood Bay - I
have dispatched Mr Kennedy
a very Expert manipulator
of fish, to Depot Island in
Lake Nipissing with instructions to
gather whatever Eggs possible up
to the end of October; he will
then return, and proceed to
Newboro, and join the other officers
there on duty

Mr Charles Gilmour
with his assistants, have gone to
the Muskoka waters North of
this place; with the view to secure
as large a supply as possible of
the Speckled Trout Ova - the distance

in each case, and the obstacles to overcome
in carrying and portaging the Eggs
through a hilly country, create considerable anxiety - Expectations
however are that a goodly supply
will be obtained - Some Muskoka
Mr Charles Gilmour will go to Minnetonka
to take charge personally of the
operations there during November.

Magog Hatchery

No Local Report will be made
to collect Eggs in the Magog Lakes
as it is postponed to attend the
Brewery with Salmon-trout Eggs from
Collingwood Bay -

Caledonia Hatchery.

Mr Labillois in charge there
writes me that the Stock of Breed
Salmon is impounded, are in fine
condition, and that Spawning
operations will soon commence.
He also informs me that he will have
a few Speckled Trout Ova to send
here, but his efforts in getting
supplies of Speckled Trout, have
not been as satisfactory as he
desired with

Cape Hatchery

Mr Gilbert in reply to queries
Enquiries the Fish stock of

Recent Salmon are in about the same as last year, are that they are in a healthy condition; and Spawning operations will soon commence.

Restigouche Hatchery

A large number of Recent Salmon are in the reservoir at Side-Head. Each account favorable thereto is in good healthy condition, and that every estimate may be placed upon getting a large supply of Eggs from them. Mr Mowat's efforts to obtain supplies of pre-Spent Eggs have not been very satisfactory, he is however still pursuing the work in order to secure what he can.

Miramichi Hatchery

The Officer's last report states that he was actively engaged in capturing his supply of parent Salmon up river: a number have been taken, with expectations of fully an average stock.

St John River Hatchery

Mr McClearing last report states that he was starting off with his [illegible] to the head waters of the

Shubenacadie, where he usually gets his supply. He did not anticipate as large a number as usual, as Salmon may not appear to be as abundant as last year, and that poachers were more numerous than formerly, this time events will prove before he shall know the result of his visit.

Bedford Hatchery N.S.

Mr Whitehead informs me that he is making every effort to obtain a good supply of Salmon at Musquodoboit River; and also at the River at Stewiacke.

Sidney Hatchery C.B.

The Officer in charge states that his expectations are that he will get as large a number of Salmon as he did last year; if this is realized it will be very satisfactory.

South River Hatchery P.E.I.

No report has been sent me from this Officer in charge, and I am not informed what progress Mr Dewar had made up to the month ending the 4th inst., and carrying out the other repairs to the building necessary for operations this season.

Fraser River Colony B.C.
Reports from this Establishment

Newcastle Oct 27/18

Mr Jno Kennedy

Your letter bears date of the 22nd and I am sorry to hear that you have not seen any Eggs yet – it may however that during the Continuance of October, we have large runs of fish may come on the Shoals and you will get a lot of Eggs – You must not rely upon doing anything at Ryan Island after the 1st as no permit will be given for – Your presence will also still be required at Newcastle in the Interim – Many

hear that the Spec Board are not sparing yet, and that he could have remained there if he liked the fish were on the Shoals, & that he can there let more about to do – Where he will go off and join you at Newton – He therefore necessary that you should join Ryan Island on the 1st to Shoot the first rise fish at Newton about the 5th prox of Novr – Clearly we may still be able to get on for a month longer – Continue visits the Shoals but be sure and

place where Capt Allan had them se-
last year, and he must be a madman
to alter it Elvira — Charley sends a cheque
for $40 for your & carpenter work etc at
Newton — a cheque for $90. is here for the
Dept for your Carpenter salary, both of
which you can get as you pass here —

Ask what Ef you can let her
Dr Bait &c on Account Salmon if you think
it necessary, but say little there, but do
not lose sight of your being in Newton
in time for work there —

All are here & safe Mary
Brother Lewis who is very low with
ague I do not think all are well

Yours very truly
Sandford

Newcastle Oct 29/87

The Hon Sir
Deputy Minister of Fisheries
Ottawa.

Sir

I beg to report having
the result of my inspection of "Dunn's
Dam" on the Tabusintac River, and the
"Fish-pass" built there for the purpose of
conveying fish over that dam.

The Tabusintac River is a
large stream and flows through
an extensive section of the County
with several Branches, and takes
Lake Hudson at the Town of Southampton.
About three miles above its entrance
into the Lake, a dam has been built
across the river to raise a head of water
for driving a planing Mill — this
dam forms a sufficient barrier to
prevent many of the fish from passing
up river to their accustomed feeding,
and breeding grounds on the main
river and many of its branches —

This dam is known as "Dunn's
dam" and from representations made
to your Department some years back of
the existence of a living fish
by means

think, this dam prevented the passage of fish over it, they asked for a fish-pass like heads of the dam that would allow fish to freely surmount the dam, and then gentle flow to reach the upper parts of the river.

The Engineer of the applicants has practised in deference to the building of a fish-way and convenient, and after some years of trial it was represented to your Department that the fish-way was insufficient, and believe for the purpose for which it was intended. Whereupon your Department instructed the undersigned to inspect the dam, and fish-pass and to report upon its sufficiency or otherwise.

Having visited the premises I have to state that the fish-pass is not adapted to satisfactorily carry out the object of giving to the fish freedom of passage up the river. Its location is wrong, as it is situated at the south bank of the Mill, some 60 feet or more below where the dam is built across the main river. A pass

Rock where the fish-pass has been built, together with the surroundings of the below it beneath which will show at a glance the improper planning of the fish-pass, and its unsuitability for the purposes intended.

An Explanation of the Sketch of the River and Dams. It will be noticed that the river is about 300 feet wide with a long Bridge crossing it for general traffic at about 600 yards above the Bridge Dawnies Dam is built wholly across the river, and about 6 feet high: To the right of the dam a race-way is built which carries water to the Woolen, and Paiting Mills below the Bridge; the water after passing through the Mills runs in a small tail-race down 200 feet or more into the River. Whilst the height of the Mercie dam is about five feet, the fall of the water at the Mills is about 12 feet, or twice the height for fish to ascend, as would be the case at the Mercie dam above.

At the first Mill, and between it and an old Mill situate about a hundred yards the present Fish-way has been built, about 3 feet wide inside, and some 60 feet in length, to overcome the rise of 15 feet fall: this pass is not

built, under the "Rogers plan": the pass in Shown in red on the plan.

If the the Main-dam above, if only 5 feet to surmount, were made accessable for fish to get over, they could pass up nine to Walkhill-dam a distance of sixty miles without any obstruction whatever; as Walkhill Dam informed a dam covered the whole width of the River; whether a pass has been built in that dam I cannot say; but should the difficulty be overcome at Dennis dam, sixty miles of spawning ground would be thrown open for all fish indigenous to the Streams, and thereby giving opportunity for the Inhabitants along the whole Extent of the 60 Miles to partake of the benefits justly, and legitimately due to them; but which by Dennis dam, and the insufficiency of the fish-pass by many Locations, they are now wholly debarred from enjoying: and the Indians, and other Inhabitants living below Dennis dam, are permitted to kill, and destroy all fish which on their upward migration from the Lake congregate in great numbers below the

dam.

dam, which it said they cannot
commonly obtain at exceptional times
of great freshes,

In conclusion I have
to state that, in my opinion the
present first-past first location
is useless, as a means of giving
freedom for fish to pass up the
Sangeen river beyond Denvis dam.

Hon. Tilton
Deputy Minister
Harbour

Sir In reference to your letter of today stating what matters in relation to Saugeen Harbour you require information respecting Piers and what matters in connection with the Harbour are suitable for Steamers to enter, I have not any thing further to add to the information having before been made by me to you & to the Engineer Capt. Bolton. I have however incidentally made mention in the course of my reports, and in letters also, to your Dept. that the Piers might with propriety be lined by your Departments, as the crew of the ship, numerous applications which have been made by individuals, who were under the impression that any Pier would be adapted to the small vessels owned by them, and also for Steamers running through the County. The applicants however have generally held erroneous views, as to the nature & requirements suitable to make the mouth of Canso a safe and [illegible] Harbour: Steamers [illegible]

of Your Department to introduce the Carp into Canadian Waters with the view to obtain Commercial benefit from the hardier species, and large size, that maintain a very high year state, and produce an abundance of vegetable matter should be selected; as they are a fish somewhat like all other natives of Northern latitudes, that have in warm, shallow, clear waters, or where the summer is almost too warm for the trout, or salmon only to live in. There may be lakes within my knowledge such as Rice Lake, Scugog Lake, and no doubt many others which might be well adapted for the introduction of German Carp. But in which waters, it would no doubt prove a valuable acquisition, it would not from many other standpoints be desirable as for the following reasons. Such waters are generally speaking the resort of Canvas back, Redhead, Ducks, Bass, Pickerel, Maskenonge and other game fish, which, as a rule will not live in waters with

and live devices, and sometimes they are permitted to take them by set nets, and seines: Now from the information I have been able to obtain regarding Carp, they do not take to bait, or hook and line, nor can they be taken with seines, or nets in deep, or muddy waters (such as would be the case in the Lakes referred to) as they always feed at the bottom, and their only mode of approach of danger is by burrowing in the mud. Where Carp are most largely reared, as in ponds by the farmers, or by individuals, large areas of ground, a pond are formed, and so constructed that when filled with water, and a crop of Carp has grown in them sufficiently fat for market the ponds, the water is drawn off to a very low stage, and the fish are then easily taken out of the mud, or from shallows into which they are led by the receding flow of water. (vide my letter of 28th Sept. last)

In this mode of the means adopted in other Countries Carp a marketable, and commercial fish, it is doubtful indeed whether Carp would be found to be a profitable

fish for our Canadian lakes, and Large rivers:- Where private persons have small ponds on their premises, in which it is found impossible to grow Spec Trout, or any of the Salmonoid family, then the introduction of Carp into these would prove beneficial to the proprietor of such ponds.

These Bass, Pike and Perch, and Muscalonge are found indigenous to many of our lakes, and rivers, nothing whatever could be gained by introducing into them Carp, as the latter are a coarse inferior fish for the table, to any of the former— In Germany and in France Carp are largely bred, as the climate is better adapted for their growth, and the means applied to produce them in the most extensive manner and cheapness

I beg further to object to the United States Govt Board having introduced the Carp very extensively and in the Southern States where the waters are continually at a high temperature the Carp have thriven most satisfactorily, in fact quite overdoing in growth, the Carp form

Manitoba water, and I should infer also in Ontario; I shall gladly assist in whatever way it may be considered necessary in forwarding the enterprise, & must be specifically answer your telegram, I should suppose such waters as the following in Ontario.

Rice Lake; Bay of Quinte; the Hamilton Bay; the Toronto Bay; the Ottawa River; and other bays & rivers of a like nature. The Rideau Canal, and the Bays connected with it, would be suitable, especially as in the discovery of the earliest point, some of the Camps would be found which would give evidence of their growth, upon which to base data for future operations.

With regard to Manitoba waters of a like description should be selected, but it is impossible for me to particularize, as I have no personal knowledge of those waters -

I am Sir
Your Obdt
Sam Dashwood
Engr in Ch

U.S. Whilst touching upon the subject of introducing Carp into the Canada in Britain I might here state that to carry out the instructions in an independent manner, as to be supply such applications as may be made for them - the following method of feeding fish should be kept in view to be acted in order to give the means of supply for distribution, thus preventing the necessity of ordering from the different suppliers of their fish for our waters.

There are at the present time four or five ponds within the grounds of the Hamilton Establishment, which by a small expenditure for deepening them, would become well adapted for keeping a stock of Breed Carp - their present depth is to shallow to prevent them by the Carp during their approach state through the severity of the winter & the Carp burrow in the mud, & thus like Eels it may be a month or more, but it is essential that the water there be constantly deep to prevent the ice forming down to the bottom of the ponds

&c.

pla Germany and France; but
I am yet to learn if the Government
is worthy of encouragement with the
dispatch of Corps into the center
of the Northern States of the Union;
for as real obstacles however the

Dear Sir

Referring to a former
Correspondence relative to the stocking
of White-fish and concerning certain
instructions from the Evidence Dept
at Ottawa to send specimens of
these fish to me at certain intervals,
with the view to ascertain the true
State of the Fisheries, and the Options
open to me in order to establish a
regular observance for White-
fish in the Waters of Manitoba I
beg to state that three packages
of these fish have arrived here by
Express all of which have proved
to be in such a state of decomposition
as to be wholly unfit to base any
judgment upon during the operation
of the Ova: the Officer in charge
informs me that, the stench arising
from the packages is such as to
forbid their carriage on the Cars:

Now in order to prevent this
very unpleasant operation when
it can only avail nothing for the purp

Nereaults Nov. 3rd 1886

Edw Dewton Esq
Deputy Minister of Fisheries
Ottawa

Sir

With reference to your
telegram of yesterday afternoon
asking the probable cost of preparing
pond at Nereaults for Carp: and
what quantity of fry could be carried
They to state for your immediate
information that I have asked for
parties what they would undertake
to deepen the pond for, and they
will visit the grounds today, or tomm
with the view of making an Estimate:
I fear however that, on account of
there being a quantity of water on them
at present, the work cannot be as
Economically, or as Satisfactorily
performed now, as in the ordinary
Spring: as before that time the
water could all be drawn off, and
made sufficiently dry, that deepening
of them could be properly done:
Shall however give you further in-
formation by tomorrows mail, when
the parties shall have intimated their

Rec Letter

Depty Mint

Letter

Sir

Referring to the Letter & Estimate of Expenses for the Establishment for Assaying Specimens, they may have had the opinion of the Assayer upon the subject of the Furnaces & the Fuel to be used, & I have to request that you will be pleased to communicate to me the result of your inquiries on this point, as soon as possible.

I think therefore that your Dept. will be prepared with the cost of fitting up the Furnaces for the purpose, & I will be glad to receive the Estimate at your earliest convenience.

I am Sir
Your obedient Servant

with the view of making a
commencement in getting a
Stock of young fish next Spring;
and should it be found advisable
to continue work with the other
ponds, after the upper one was made
ready, the work could be proceeded
with during the winter.

It cannot be too strongly
urged upon any Gentleman
so proceeding with the one pond,
which when completed would give
an opportunity of forming a correct
Estimate for the Construction of
the remaining ones as regards time
with a view and would thus
enable us to find out for the
public good exactly for the purpose
required, so that we could intro-
duce some Carp into it before
a frost sets in, and then water
for the Establishment of Carp better
almost at once. Roughly
Estimated may that 3 to 4, or even
at most would complete the one
referred to, would not I cannot
say to 3 or 4 — I shall await
your views in this matter

I have the honour to
be Sir
Your most obedient
humble Servant
Thos. Austin

The Secretary
Acclimatisation Society
London

Sir

I have the honour to acknowledge the receipt of your letter of the 1st inst. and to inform you that I shall be glad to undertake the duties of Superintendent of the Acclimatisation Society's Establishment at Regent's Park, at the salary of £150 per annum, as stated in your letter.

I shall be prepared to enter upon the duties of my office on the 1st day of December — I am, in reply to your letter, to state that I shall be ready to undertake the duties of my office on the 1st December next, as mentioned in your letter.

Later on Mr Austin writes from Perth Scotland — "I shall send you more ova each year as possible to Bracklinn, and prevent the last ova at the place you have specified only, and will do all I can to promote a success of the Society"

On the 1st Dec. I sent the following extract from a letter received from Mr Austin (dated last year) to prevent that place and take charge of the work of collecting Ova &c. &c. Mr Austin arrived — Mr Mc Kerrich arrived — Mr Austin Mr Kerrich left — Mr Austin has never been here since, and only arrived on Saturday last — they will start to-morrow — Mr Austin Commences operations — Mr Austin has been here nearly a week — to do anything with, and I can get them Commence and help them get the ova from —

From Mr Austin Mr Austin
Letter returned from Newcastle

Accomac Nov 9th 1816

Rev Sir Wm Collins Esq
Bishop Episcopal Church
Philadelphia

Sir

Referring to the contents of your letter of the 27th ult. which I have this day received, I immediately directed Mr Chas Mitchell to transcribe the required number of the Liturgies from you. — This morning I received a letter from him, stating that he had only finished about half the number, and that he could not possibly get the whole done before Monday next. I am therefore induced to write you this letter, to request that you will be pleased to forward the remainder of the Liturgies, as soon as they can be got ready, by the Packet, which sails from this place every Monday morning for Philadelphia. I am sorry that I am under the necessity of troubling you with this letter, but I could not avoid it, as I was not informed of the number of Liturgies wanted, until I received your letter of the 27th ult. — I am Sir, with great respect, your most obedient humble servant

Wm Collins

Rev Sir

Your letter of the 27th ult. has been duly received, and I have given the necessary directions for having the Liturgies forwarded to you, as soon as they can be got ready. I am sorry that they could not be sent on by the Packet of this morning, but it was impossible to get them ready in time. I am Sir, with great respect, your most obedient humble servant

to your town, or in any other upper
situation upon St Johns River. Hair ap-
eared to conclude home after
the first year Experience in spending
their Night, I have now since to com-
mended other means to be adopted
for the carrying the Affairs of Nature
Life for the St Johns and Rotchon
which in my humble opinion that
would fall far Expenditure, and
would clearly warrant a free
Passage & Life for that Liberties
from Gentlemen.

It is hereby agreed with
M. Nelson Living being all this done
for planting Pineapple Plants &
Shrubs with a Friendship for my
part Rent. for all which he plans
in mind & diligency Now Settlement
& Life, marking the each Plant
Settlers a Title on it & and what
the individual work of each plot is
to increase, the quantity of Fruit
taken from them is nearly 60 f.
Less than should be realized from
the expected Number of Inventors.

If the present Occupiers
Operations on the St Johns River, were the
first, or were of an Experimental Nature,
it might not be held liable of such

Ottawa

Sir

Referring the Expenditure connected with the Erection of Steam Saloon to be fitted by the Superintendent hatchery with Engine Boiler and necessary Gear, to appear again about Steam & Engineering Establishment, that the Contract adopted to be fitted this hatchery with Engine Boiler Steam Gear & Pipes for Steaming purposes has been carried out by the Captain & Engineer Mr. Stebbing formed Contractor

I do hereby certify the Officers charges Steam Engineering have taken any part in bringing about a more satisfactory result, that the system being recently introduced to Canada should be carried out in such a manner as to afford the Captain & Engineer of the Steamer the very convenient working of this Establishment, that it is necessary to have an inspector visit to [illegible] adequate supervision of the Steam

an objectionable character; which has been absent from the beginning of last year, sometimes better, sometimes worse, than the present year.

Independent of my own recommendations and suggestions for putting other means into adoption for supplying this deficiency with Ammunition, the Ordnance Office has also urged that the present system is wholly inadequate to such establishment as this.

I have therefore respectfully ask your Department to take this matter into consideration, with the view that general measures may be adopted by which the Militia Regiments, which have deficiencies of flints, and complete equipments of powder pouches, and cartridge boxes, may be supplied upon a better footing in the future.

Sam Thurnot
Supt F.C.

Newcastle Decem 4/86

Mr Alex Mercer
P. O. Campbellton

Sir

Your favour duly received
since I write your statement about
Spec Print, I am sorry you were
not more successful — Let me know
in your next what number of proof
You may rely upon. If any over
Crop of April Print You will over
come up to the number required
by the Dept at Ottawa.

Thank you for Your letter of Salmon Roe
which favour especially — You
had better commence getting your
Report early, and fill every par-
ticular before it is actually
as possible, put in anything that
may appear to You of importance.

Regarding Your bond for
proving Young Salmon, I do not see
how I can do anything — Mr Sellers
has said nothing true about it, he
shall be elected, therefore we can
not attend it — I am individually
certain that the proving of Young

Salmon in small adjacent ponds cannot result in success but must subject poor keepers of the young fry — however proceed with the work as you best can, and I hope you may dispose my ideas in the matter.

I draw from your correspondence that your father was at La Douceur. The French Officer there reports somewhat satisfactory of his operations and of having a good stock of Eggs.

Hoping to hear from you soon regarding all matters and Receive your annual report

I am
Your truly

should take the oysters from the fish, and put them in Spirits of some kind; or strong brine, in bottles, or cans, and seal them over. — I presume however the fish were packed in boxes by the fishermen as they were taken in the several Lakes in the interior, and forwarded by Express at the nearest Railway Stations. without the Inspectors knowledge.

I may state however that, the last package of these Specimens came to hand a few days ago in a frozen State; from an inspection of the oysters of these, and from what I could glean from some of the former packages which were in a partial State of decomposition, I would say that, White-fish are not suitable for depositing their Ova in the Lakes of North west, and Manitoba, Earlier than in the waters of Ontario; which period would cover the month of November, and early part of December. — I am of opinion that the Ova of Fish used by Inspector McPherson, and other

Newcastle Decem 15/86

Wm Sitton Esq
Deply Minister of Fisheries
Ottawa

Sir

I herewith Enclose an account of the Agent of the Express Company for Charges upon a Number of Packages containing Specimens of White-fish, forwarded from Manitoba, and the North West: -- Amt of Acct $28.25

These packages of fish were sent by Messrs Mowat and Gibbons Fishery Officers in the North West, by instructions from your Dept.

I regret to say that in the most packages came to hand in a perfectly unfit condition for particular Examination; most of them were in a putrid State. Of this fact I wrote Mr Inspector McQueen, telling him that it was perfectly useless to send fish in this way, as the principal object sought to be learned could not be got at, on account of the putrid State of the Ova [illegible] but that the

3

White fish deposit their Ova in the waters of the North West, and Manitoba during the Month of October, are Ripening and must certainly indicate the comparative State of Ripeness of the fish sent me, they could not be omitted per the fish, as they were still held together in one mass, and therefore unripe, and not susceptible for impregnation by the Milt of the Male fish.

I should therefore conclude that the period in which White fish become ripe to lay their Ova in the North West waters, is the same as in Ontario.

Please forward the Express account Enclosed herein, as the Agent requires it at once -

Wm Litton Esqr.
Deputy Minister & Secretary
Ottawa

Sir

In my earlier letter of this date transmitting certain account relating to the collecting of Revenue, I omitted to enclose therewith a Schedule, or diary of proceedings kept by Mr Chantler Wilmot during the time employed in procuring Salmon Trout at Waiatoo in Calvert Bay. — I now send it herewith for the information of your Department, and in explanation of the cause of the greatly reduced quantity of Eggs obtained the season of 1886, as compared with the satisfactory supplies collected at Waiatoo in the fall of 1885.

It will be noticed that some 2,725,000 Eggs were collected at Waiatoo last fall, as against some 1,300,000 during the season of 1886 this great discrepancy in the number of Ova was occasioned by the non performance of certain agreements entered into by Mr Saunders

Your Department, in which he
expected to set a certain number
of Trap Nets at certain potent
Stations in Colpoys Bay, to be
in perfect readiness for capturing
fish for the uses of the several hatcheries
on the first day of December: But
notwithstanding the urgent demands
made upon Mr Jeanneau to have these
nets set in due time, he neglected
to do so, and the middle of December
(15th) arrived before any fish could
be obtained to fertilize spawn for,
and at which date in 1885 some Six
Millions of Ova had been collected.

It had been learned by
previous Experience that, by far the
greater, and more healthy number
of Salmon Trout Egg could be taken
upon during the first half of the
month of December, on account of
the less liability of injury to the fish,
and Ova from rough, cold, and
stormy weather, which invariably
prevails after the middle of November;
and hence it was that the urgent
demands were given to Mr Jeanneau
to have his nets set ready for full
operation on the 1st December.

It is matter of deep regret
that this unexpected, and unfortunate
result in the procuring of adequate
supplies of Salmon Trout Egg at
Hatcheries, to stock the Government
Hatcheries, should have occurred;
for it was confidently expected,
especially after the gratifying success
of the Operations in gathering Ova
at Hamilton in 1885 that, even better
results would have been shown in
the Season of 1886.

Knowing full well the
adaptability of the fishing Stations
in Colpoys Bay, and the undoubted
number of fish that frequent that part
that pertain of the Georgian Bay, the
Authorities were entertained as to the almost
unlimited supply of Eggs which ought
to be collected there not only for the
Penetanguishene Nursery, but also for the
Hatcheries in the other Provinces;
and calculating upon their being
for several supplies of Ova; the Meaford
Establishment in Quebec, was made
dependent for its Stock of Eggs upon the
anticipated collections of Spawn
at Colpoys Bay, where Experience
had shown that, the certainty, and
Economy for supplying the Trap

Hatchery with Eggs, was by all odds greater than had been the former experience in Lake Memphramagog.

The present state of affairs shows about 225,000 Salmon Trout Eggs all told as against some 1,800,000 laid down in 1885: Hence this it will be seen that after the Mass of misery in Lake (now without an Egg in it) shall have got over a small quota, the balance remaining for general distribution for the Memphremagog Hatchery will stand Compared with former years to be very small indeed.

I am Sir
Your Obdt
Sandfield Mc
Supt. F.C

P.S. There will also be found appended to the Schedules a letter from Inspecting Officer Macfarlane which is explicit relative to the taking up of the nets in accordance with instructions.

which Mr Venner last year, which was, I understand, the other Mr Venner Officer in charge of the Restigouche Hatchery, I wish to call the attention of Fishery Station as may be most convenient to the Reservoir at Tide-head, with the view to engaging as many of these Men of nets as will fully supply the requisite Number of Salmon for Stocking the Hatcheries with Salmon Eggs.

I have also to suggest that Mr Venner should not be restricted to attending with the same Number of Men of Stations, as were employed last season; but that he should also be authorized to procure such other Stations as he may find necessary, to ensure an adequate supply of Parent Salmon.

This matter being urgent I respectfully ask an early consideration of the subject.

I am Sir
Your Obdt
Sandfield Mc
Supt. F.C

Newcastle Jany 20/87

Wm Little Esq
Deputy Minister of Customs
Ottawa

Sir

As the season is just at hand when the Net fishermen on the Estuary of the Restigouche River, are about making their contracts for the sale of salmon taken by them during the fishing season: the Inspector necessary for such of the fishermen whose catch may be required for breeding purposes in connection with the Hatcheries, to be made aware as to whether Your Department will continue the arrangements which were made with some of the fishermen last season. This arrangement must be entered into with the fishermen at once, in order that they can make their preparations, as to nets, &c - in time for the coming early runs of salmon in the Spring.

I desire to recommend a continuance of the same system

Newcastle Jany 20/87

Wm Alex Monat
Fishery Officer
Dalhousie

Dear Sir

Yours of 17th inst. to hand relative to the necessity of arrangements being made in time for catching with Nets of fishing stations for adequate supplies of Parent Salmon. I fully concur in your views and have this day written to the Dept to have them carried out - and to authorize you to engage with 2 additional fishermen (should you consider it necessary) those were employed last year - with the view that any reliance may be placed upon receiving all the supply of salmon necessary for the increased capacity of your Establishment at Dec. Isle; and if possible to give an opportunity for benefitting other Hatcheries that may fail in procuring their troupes with Eggs.

The other matter referred to in your former letter will receive attention

Yours &c
Sandford Fleming

Lancaster Jany 22/87

Rev Tilton Esqrs
Deputy Minister of Fisheries
Ottawa

Sir

In reply to yours of 19th
inst "asking for the amount of Salmon
"Kent Ova secured at Pigeon Island
"last fall: and whether the services of
"the Fishery (C. Roy) rendered any
"assistance in procuring them?"
I beg to state that, the No of Kent
Ova gathered at Pigeon Island
amounted to some 1,500,000.
and that.
Mr Patrick Roy rendered
most satisfactory service in assisting
the employees sent to that fishing
Station to gather Ova;- and in
addition I may further state
that, Mr Roy has in former years
rendered similar advantageous
help;- and were it not for Mr
Roy's willing assistance, and hearty
Co-operation, the quantities of Ova
usually collected at Pigeon Island,
could not have been secured.

I am Sir Your Obedt
Servt

they cannot be sent so long a distance as crossing the Atlantic to England with safety – In some instances (one when sending Ova to the Marquis of Lorne) the Ova have even reached from the North of Scotland in pretty fair condition.

Should your Department decide to forward any Ova upon Canadian fishes to the National Fish Cultural Association of England, We shall endeavour to pack them in the best possible manner and Ship them with written instructions how to take care of en route.

It would be matter of information for me to learn what success attended the Shipments of Ova to the Colonial Exhibitions in London last year; there were sent (two Shipments were made) under the care of your Superintendent Officers having charge of the Canadian Exhibits so far I have not heard anything relating to the success of these forth &c –

Should Salmon Eggs only be required beyond the Association Enclosure, they could be sent in the Bedford Hatching-

Newcastle January 26/87

Hon Sitton Esqr
Deputy Minister of Fisheries
Ottawa

Sir

Referring to your letter of 19th inst relating to a request made by the Secty of the National Fish Culture Association of London England to know whether Salmon or other Eggs of Canadian fishes could be obtained with the view to their introduction into English waters: — I beg to state for the information of your Department, that, ova which arrived at a certain stage of incubation might be transported to England with a reasonable degree of safety, provided necessary care be taken of the Eggs during transmission by Railway and by Steamer.

It has always been found that, in order to insure safe transport of Eggs, a messenger should specially accompany them — when this is not done, it has usually happened that the almost whole lot,

having a lengthened overland route, and warranting a greater likelyhood of reaching England safely —

I cannot pass this opportunity of informing Your Department that, with the unexampled success which attended the transmission of Salmon Ova to England in 1883, from the Bedford Hatchery — their hatching out, and after growth to years in the troughs at the S. F. E.; and obtaining the Gold medal as against all other competitors from various parts of the world; the Ova of many English fish species, exposed with the prejudice of English Nationality, declared over Salmon, not to be the favourite Salmon Salar: — this absurd, and ignominious reception, entertained by some of the English public at that time, would not find such pleasing encouragement for shipping Ova of what "Superior Canadian Salmon" to England.

Newcastle January 31/87

John Tilton Esqr
Deputy Minister of Fisheries
Ottawa

Sir

Referring to your letter of 22nd Inst: asking for a Statement showing
1st No. of Parent fish obtained at Each Hatchery:
2nd Cost of obtaining such fish;
3rd No. of Ova laid down at each hatchery.
I now beg to send this return; and have also added more particulars relating to the subject, in order that your Department may be informed as to the relative Number of the Sexes;- The average Number of Eggs taken from Each female;- The cost of each fish at the several Hatcheries and the estimated cost per Thousand of the different Species of Ova, gathered at Each of the Establishments.

This Schedule, which I have endeavored to make out as correctly as it is possible to do so, from the several Returns which I have received, as Embodied in the Annual Reports from the several Officers in Charge; (which Reports have just come to hand) and whilst the Schedule has given me

much labour, and considerable calculation to compile, I nevertheless believe it will be found a sound basis from which a more correct opinion may be established as to some of the Hatcheries; and whereby the moneys granted for preserving present fish, may be more judiciously expended, with the certainty of securing a more satisfactory supply of Eggs.

The contrast between the cost of present fish, and Eggs, as shewn in the Schedule, is conclusive as to the necessity of a more efficient method being applied to some of the Hatcheries in the future.

No. 1. or Fraser River Hatchery, although given in the table, should not be fairly compared with the Atlantic Salmon Hatcheries Nos. 2. to 9 inclusive; on account of the immense number of fish, and the easy means of catching them in the Fraser River: — But the comparisons are to be made only, with regard to the work in the Atlantic Rivers, where the difference between 9/3, and 5½ per Mt. exists in the cost of Eggs. of the "Salmo Salar."

In explanation of the very low cost of Eggs per Mt. at No 4. Dumb River, viz 9/3, it must be said that, it is the only Establishment built after the plan originally adopted at the Fishery

Dumb River

Establishments at Newcastle Ontario, by which the Salmon are on their passage up Stream, enticed into a receptacle or pond where they become entrapped, and are daily disposable for Spawning purposes, and at all times, access to them is prevented, and no person is allowed to fish, or trespass the receptacle or adjoining ground is constructed immediately alongside the Hatchery.

Jacksonville

No 9. Jacksonville Hatchery should be used for cheapness, being only 27. per Mt. Ova. — Here a convenient pond, or salt water reservoir, should exist alongside the Hatchery, where the Salmon are impounded from time to time as spawning takes place. The present fish are taken in nets a short distance from the Nursery, and towed into the pens; the nets also are worked by employees of the Hatchery.

Nos. 6 & 8. Miramichi, owing to scarcity, stand next as to cost of Eggs per Mt. each being 44: Miramichi has a large reservoir alongside the Hatchery, but inland of the present fish being found in only limited numbers; they are netted with the "close bins" and towed down river to the reservoir. Whilst the cost of Eggs is next great, it is by many owned

Miramichi

sheen,- which otherwise would be the case, as the fish would be sold in the market, for consumption: the average price paid for these [illegible] If it were possible to employ the full complement of fish, in the manner as at Tadousac, namely, the price of £5 per 100 could be reduced to 30/- or 50/- per 100 at most.

Sydney

At No 2. Sydney C.B. Mr Stokes, the reservoir is entirely dry; the present fish are netted in the ocean river, during the spawning season, & not carried long distances to the hatchery. The period employed in netting the fish being short & little labour is required, which brings the cost of Eggs down to some 12 per 100 - the method is objectionable in taking the salmon during the "close time" as at Miramichi.

Redfern

At No 3. Redfern N.S. small traps are used at several rivers, where the salmon are kept when caught at the "close season". This plan is carried out on several of the rivers in N.S. causing increased Expenditure, the average cost of each salmon, amounting to upwards of 5/- and the Eggs to 6/- per 100. The same objection is raised here as at Miramichi, and Sydney, the fish being caught in the rivers at the time of spawning. To obviate this a reservoir, with outside feeding station, should be provided, in order to

[illegible] objectionable methods as the fixed nets to fishermen, and other to complain of so many perch fish being destroyed with at the Spawning time, which otherwise would be left in the Rivers in the natural way as heretofore, they claiming that, unless formed the impenetrable Salmon should not be interfered with in any way in the rivers at the Spawning time. Restigouche Establishment has a fresh water reservoir some distance from the hatchery in which the present Salmon are impounded from June till November. The fish are netted ocean bay, and hauled in carts to the pens; The work is done by the use of nets and labour under the control of the Officer in charge. No salmon are taken during the "close time". Restigouche

No 7. in the Schedule, or Restigouche hatchery, theres Records of Eggs the 100 lbs. Here a large reservoir is built at the head of tide-way: The parent salmon are mostly brought from the neares fishing stations, and towed in crib to the pens during the legal fishing season in June & the fish are again let free into the river with a trifling loss, - with the evident saving from total destruction, and loss of the present salmon, and the Eggs within

supplies of parent salmon from the early runs in June, Lachr. Rapids.

St John River

At No. 5 St John River Hatchery in N.B, the exorbitant cost of parent fish, over $88 per is beyond all precedent; each fish so taken amounting to about $17 cts with the corresponding high rate of $35 per thousand for Eggs. The uselessness, and costliness of the method of procuring Eggs for the St John Hatchery, should forbid its continuance; especially when means are at hand at the Estuary fisheries of the River, to readily supply parent fish, in like manner as at Tadousac Gaspe, and Restigouche.

Magog

At No 10. Magog Hatchery, no Effort has made to obtain there, in the anticipation of getting full supplies of Salmon trout ova from Nepanee which have to be collected at Trenton - This anticipation will be only partially realized from the non fulfillment of certain arrangements made with the C. N. Railway to capture parent fish.

Nepanee

At No 11. Nepanee Hatchery the average cost of Salmon trout Eggs per M collected at the two Stations is there - at Trenton Georgian Bay 36 per M at Pigeon Island Lake Ontario 17/4 do. Upon the calculation that the quantity of Eggs would have been obtained at Trenton as in 1885, if the trap nets had operated during the whole of the month of November last as contracted for the cost of the Salmon trout Ova would have been reduced to 9 per thousand instead of 36 per M. as at present related.

Sandwich

No. 12. Sandwich White-fish Hatchery. There forty six millions of White-fish Eggs were collected at a cost of about $438 or barely One Cent per thousand. There were also deposited in this Hatchery some twenty five Millions of Pickerel (Dore) Eggs during the past year, costing about $315 or about 17/4 per M.

Trusting that the Schedule, and remarks herein will give some additional information to your Department relative to the subject of fish Cultural operations

Jno Tilton Esq
Deputy Minister of Fisheries
Ottawa

Sir

As the time is now at hand in which fish Eggs intended for any other localities in the County should be transported I beg to enquire whether it is proposed by your Department to transfer either Salmon Trout or White-fish Eggs from the Newcastle Hatcheries to any of the Establishments in the Interior Provinces. I am not aware of any applications having been made by any persons as in previous years the only Officers asking for these Eggs are at Bedford and St John these Establishments who make mention for supplies in their Reports.

The Magog hatchery will necessarily have to be supplied from this Nursery with Salmon Trout Eggs, as this has been fully understood from the beginning of the season; the transport of them to Magog will soon take place: But before doing so, it is advisable to hear from your Department what other orders

may be required to be filled; so that he could be able to apportion the Eggs as we would be most advantageous.

Some correspondence has had regarding the forwarding of some fish Eggs to the National Fish Cultural Society of England, may I ask whether any thing is to be done in that matter, not a moments time is to be lost for Shipping Eggs across the Atlantic, to ensure safety.

Your earliest attention to the above matter will much oblige

Yours Obdly

However North Shore fisheries—
I cannot explain to you my reasons
in full here, but I have written largely
on the subject which may be found when
there being printed— my idea is
that, the Detroit river White fish business
must eventually die out for as such
Fish, all fish coming to the Detroit
river to spawn will in time be taken
by the immense numbers of Nets
in use at the head of the Lakes— We
will be seen from the Evidence of
some 40 practical fishermen from
Mamm. Toledo, Sandusky, and
East as far as Erie &c that such
catch of White fish has been rapidly
increased up to 1868 since which they
all say that, there is a falling off
to the Hatcheries— from up to the 20th
of Jan taken in 1868— Your Hatching
has turned out nearly 6 for each
here young fish that are of
American hatcheries put together
this will go to show that, our young
fish part in the River are carried to
the Southern side principally, and
remain there till they go South—
It must then I have advised
the Dept to have all of our Crop
of young fish put in at points on the

[illegible] of Lake Erie

North side of the Lake
Ohio & Detroit to some being put
in Erie, and also a few
Detroit River, but few
part are young White fish
the rise - Wardens Head, &
down with the strong Current right
into the heart or back of the Lake Erie.

I however gather
from you that you will see all my views
on that subject — I report, and
I think they merely part company
there with them certainly the
South Shore fisheries are being
largely increased, but I know nothing
of their true value —

With respect to your Brief
I will forge ahead for Richard— I think
you had better drop a line also
to Richard & the Deputy Minister as
Ottawa, and if he writes me I
will then answer him — You
had better however make your
arrangements about when you
are to go for your Richard then Sport

It may be that the Dept may
want a Number of White fish Eggs
for the lower Provinces— We do not
as yet know and Davy not even

Yours very truly

Sir

I am instructed to report upon an application made to your Dept for a supply of salmon trout fry for stocking at Moncton, at the request of Hon L. E. Alexander —

I notice that the lake in question is small, and that it is largely inhabited by suckers, eels, pickerel, and sun fish — these latter orders of fish being enemies to this lake, indicate a water of a high temperature, as they usually muddy waters — which features are not favourable to the growth or life of salmon trout, and cannot therefore be specified to give the returns desired — Black Bass, Mascalonge or Carp — would be most suitable for such a water, as these fish will prosper well in waters, where the salmon family cannot exist.

I am Sir
Your Obdt
Superintendent

Newcastle Mar. 9/87

Wm Alex Morrat
Fishery Officer
Campbelltown

Sir

I wrote you to day to
"make all necessary arrangements
"with Watsonmen to get supplies
"Parent Salmon to fill hatchery with
"Eggs dont delay: also send on them
"Eggs immediately"

Upon receipt of your
former letter about arrangements
fishermen, I wrote the Debatory
Secretary on the subject - and I
received the reply. "Morrat had
"unrestricted discretionary to make
"such arrangements last season
"as would ensure procuring parent
"fish to fill hatchery, but was only
"partially successful"

"You are now authorised
"(meaning myself) to take such steps
"as will this season secure all the
"parent Salmon that may be
"required: as the hatchery is now
"in full operation it is desirable
"that a full supply of Eggs shd
be procured"

Upon the strength of this I telegraphed you, to make all arrangements necessary, and this I hope you will do, in the most satisfactory way with the view that, nothing shall be left undone to carry out this object. In making your arrangements with the fishermen, make them in writing and see that the men are reliable and will carry out their agreements, as to proper nets meshes &c &c.

You will also have to take the most guarded means from-
Stretching Your Pen, to that there will be no possibility of the Salmon escaping from it after they are put in:- and that the men you engage to watch the pen, shall be the most reliable, and trustworthy, in order that, there may be no chance whatever for the Club or any one else to make any just complaint, and by all means dont allow the watchmen to be away from their duty at any time or I fear there will be some of my nets to take advantage any absence

2

occur report to the Department. I think if we can make a grand success of the work in catching, and keeping our parent Salmon, and filling the hatchery this coming season good will arise to you, and myself in connection with it. I believe the Minister is going to take Quick rounds during the next season to see all the Establishments himself- so that he can fully report upon their fitness and Efficiency.

You will therefore see the importance of your carrying out my instructions in their letter, and whilst you are expected to carry out the work fully, you will not be stinted in the expending but it must nevertheless show economy in the proceedings. You will therefore not lose a moment in perfecting your Pens for securing a full supply of Salmon - and let me hear of your progress as you go on.

also have to take with him, and
set up in the Hatcheries below,
a Number of the Automatic Glass
Incubators, which are indispensable
for the hatching of the White fish.

Marseilles March 10th 47

Mr Litton Esq
Deputy Minister of Fisheries
Ottawa

Sir

I this day received your telegram of to day regarding the forwarding of 1000 or 2000 White fish Eggs, and 1000 or 2000 of Salmon Trout Eggs to Nova Scotia, near New Brunswick; and wishing to know also if it would be late to ship Eggs to B.C. &c &c.

In reply to enquiring what points in N.S. & N.B. the Eggs are going to, and also stated that a messenger should be with them to guard safety:— and that it would be too late to ship Eggs to B.C.

Since receiving my telegram I have inspected the Eggs in the hatching house and find the late gathered Eggs of Salmon Trout at Wiarton, are more than usually backward in their development, and will require detained shipment for the next 15 or 20 days, which will give me ample time to have ready to forward Fertilized Eggs

Regarding your instructions for me to write Seth Green & Mr Caldwell Jersey City & those parties, as to if or not I have done so, as to receive other persons in the United States, and am now writing them & applying, but before to shall be able to write to Mr Caldwell I have a reply from Mr Seth Green & Mr Caldwell that they have on hand about three Million of Eggs, but the application was a very short time to come to hand therefore:— Immediately upon drawing from the ova I will give you know the prospects.

Regarding arrangements for shipping Salmon Trout Eggs to Nova Scotia I have given further instructions to Mr Mowat to have every arrangement made to that effect.

I am Sir
Yours Truly
Sam Wilmot
Supt.

P.S. Should you consider it to forward Eggs to British Columbia let me know at once, as he shall then to prepare the necessary stock for packing &c

Mr

duncan is not a canoeman

Beauvallo Mar 15/87

Jno Tilton Esq
Deply Minister of Customs
Ottawa

Sir

In pursuance with your request, I am making arrangements to transfer from a number of Hatcheries Magog, St Jno River, and Bedford Hatcheries, in carrying this out Mr Charles Wilmot will leave here with certain quantities for each of the above mentioned— The Officer in charge of the Magog Home will be notified to meet the Shipment at Montreal, and take his supply from Mr Wilmot; On the same day Mr A B Wilmot will be instructed to meet his quota at Montreal and take the Eggs on to his Hatchery Mr Charles Wilmot will then go on and deliver the St Jno River Eggs in person to Mr Norsworthy, and also fit up the Incubators for the White fish Eggs— I do not think it advisable to send any over the Road, or White fish to Minnedosa this Season, as the necessary

Beauvallo Mar 16/87

Jno Tilton Esq
Deply Minister of Customs
Ottawa Ont.

Sir

Referring to your telegram of this day relative to transporting White Eggs to B.C. I advised them "That most latest limit (Eastern) Mount could be ordered to meet messenger at Regina; will write instructions along with Messenger — precautions all through Mount unless we have discovered good Eating White fish in B.C. Lakes"

Should you therefore decide to send White fish Eggs to B.C. pray give immediate orders as that, I can instruct Mr Wilmot or some other Officer to look after things in readiness on their carriage. I wrote "precaution" in my message from the fact of the long journey, and especially as, peculiar "Salmon eggs" will be required at the Hatchery to suit the working of the Automatic Glass Incubators, which I fear Mount knows nothing about, as he never had any experience as to this fish [illegible]

of the nature, appearance &c of the true White fish "Coregonus albus" of our Eastern inland fresh waters seas.— there is a description of White fish found in some of the lakes in the Maritime Provinces, they do not fully equal our Ontario, Erie, and Huron Lake White fish — I mention this as I want to let some years ago that White fish were to be had in the upper waters of the Restigouche by some of the Micmac families, and I made an inspection, catching a few, but found they were not at all up to the Standard of the true White fish of our great Lakes. Should however what Mr Howard may be right in his statements concerning the B. C. White fish.

I shall await your instructions in regard to shipping Eggs to B.C. as per mem.— It will be necessary for me to order a few hundred more of the Glass Incubators, for we have barely just enough to carry on our own increasing business in White fish hatching

Newcastle June 17th 57

I. P. Caselli
L.D. Fadenrecht

Sir

Referring to the subject of obtaining Spec Ponds &c &c for over the year, I beg to require what protection I may claim by the Regulations of your Office relative to the work to be done & the Specimens that have been sent by you relating thereto & I have no doubt that large quantities could be taken there if means were adopted to catch them.

Mary Sargeant has this year established last year — whether it was kept as a close stream or whether it was fished to death by Anglers as would be the case if they had their full swing at it — Poor Mrs Sargeant when living protected this stream fully and as used to dispute

makes a discovery & the methods to be adopted, do think it would be practicable to attain & arrange as must set them in operation. I don't know what Elevation he has in his Watershipp the House; a practical observation which is the best criterion from which is usually applied & the Lordship knows for Salmon &c.

Regarding White fish inhabiting the Waters of British Columbia Mary has stated that, "Several years ago, there "the discovery the other day that White "fish and Spice-Fish abounded in "your large interior Lakes, which "Eaten the White fish, we found "them quite as good as the Eastern "White-fish, and I am satisfied "there will be an important trade "in them in a few years."

This is an important discovery if found to be correct, and I do not see why it may not be probable that, if taken by any magnitude are found in B.C., why White-fish may not inhabit them. I cannot say however that, Mr Mercant may be fully up to the Minutiae

Deserving Applicants —

I received two letters
this Morning from Mr Jas Annin
Now Lanpton Co. of the State of Wisconsin
Fish Hatching formerly our
Officer in Charge of the Sandusky
Hatching. He kindly offered
his services to get a lot of Spec-
imens for us and to attend
with others he may [illegible]
of fish to be delivered at Chicago
free for $5 [illegible] for [illegible]. His second
letter went further in stating
that, after seeing the Parties
he thought he could get six
800,000 Young fry at about $3
per M — and if he sent a Messenger
for them to Chicago, he could
donate 10,000 California Salmon
Eggs in consideration of his
former acquaintance with
me, as he attributed his present
success with a Salary of $1800 per
annum and all Expenses paid, from
the knowledge he obtained from
me as a boy when working at
Mr Meredith's Hatching, and
afterwards in charge of the
Sandusky Hatching — I wrote
you this last Offer, and from

Canada, & that
the Memorialists
are desirous
to be informed
whether the
Government
intend to

as his instructions have been of the most positive nature, to make every effort with economy, to secure a full supply, I have not doubt he will find it to be exerted to the utmost limit.

I cannot conceal from myself the fact that the transportation of the Recruit Soldiers from the Western Stations of the Interior of the Islands, to Nassau N.P. by the Steamer, not only unnecessarily exposes them to the risk of Sickness, but also of exposing them to the destructive storms of the Gulf Stream, in consequence of the delay which is inevitable in the transhipment of the troops at Key West, which delay of course would be avoided by the direct passage of the Steamer from Havana to Nassau N.P. which I have therefore respectfully to request may be authorized.

I have also to call your attention to the fact that the Steamer Bermuda, in the event of her being required for the transportation of troops, will be unable to receive on board more than 100 men, as her accommodations are limited to that number.

I have also to request that the Steamer may be directed to call at Key West for Coal, on her passage to Nassau N.P. as I am informed that the Coal Depot at Key West is now well supplied.

I have the honor to be Sir, Your most obedient Servant

Your Obedt

Peterborough Sept. 18 1887

Jno Tetley Esq
Deputy Minister of Fisheries
Ottawa

Sir

I am requested to Your letter of the 15th Inst to state for the information of the Dept by whom upon the present cities Canada in Ontario, and whether the season is now sufficiently early and long for efficient pisciculture, and what changes, if any should be recommended; — and whether I favour the adoption of a Regulation prohibiting the retaining for sale of [illegible]

[illegible]

[illegible] the season commenced on the 15th Inst instead of the 15th Inst as at

parties are now fully acquainted with the present close season from Sep. 15th to May 1st I would recommend its continuance; and that this period be so much rigidly enforced throughout all parts of this Province, and in every description of Water, whether it be Lake, River, or Brook trout.

I beg further to recommend to your Department that Speckled-trout should not be taken with Nets, or any other thing. Except by means known as Angling with Rod and Line; which would cover fly fishing, bait fishing, and Trolling only.

With regard to the adoption of a Regulation prohibiting the catching of Speckled trout under 10 inches in length, I may say, it would prove wholly useless, and could not be carried out by any per cent of precaution your Department could institute. Being thoroughly intimate with the catching of this Class of fish, I feel safe in stating that it would almost prohibit the taking of Speckled trout in Ontario, as fully nine tenths of these fish taken

in Ontario would not be under the Standard of 10 inches; in fact I may say that, the most desirable ticket for anglers to catch; and those most delicious, and otherwise best adapted for table use, would be found of not 10 inches, but from 12 to 14 inches; In order to give you a clear demonstration on this subject I have hereunto made a pen and ink drawing to a Size-scale of 10 inches in length. Upon which it must appear with all anglers, and others practically acquainted with the Speckled trout, that their average would fully satisfy the Sportsman, and they would be most acceptable as the greatest delicacy for the table.

Only prevent netting, trapping, and dynamiting the Speckled trout in our waters, and the above average Standard would soon be reached, and the boon would be acknowledged, and accepted by all classes of the community — the only persons affected by it would be the poacher, the lazy indolent netter, and trapper, and the self Styled, and com-

[illegible] apertainances.

[illegible] are seven States in the American Union in which the [illegible] have sought to [illegible] for the [illegible] others have differed [illegible] have [illegible] but [illegible] have [illegible] most where such votes were [illegible] are [illegible]

What you left to have asked from the representatives [illegible] Close Seasons" were the [illegible] and others [illegible] [illegible] will be considered as abstinence, where I refer to the subjects of the Academic Year course, except in the North Bank, where differently to the former when there will [illegible] [illegible] the course of which is [illegible]

(1) [illegible] over the table of Close seasons [illegible]

[illegible] which [illegible] [illegible] [illegible]

[illegible] possibly able and very desirable to have similar laws respecting the preservation of the valuable [illegible] fish in the Eastern Provinces?

The subject of protecting not only Shad, but all other kinds of fish during their spawning season, and for some months, and [illegible] all [illegible] Rivers, will I think [illegible] attention from your Excellency which it so [illegible]

I have the
Honour to be
Sir
Your most obedient
humble Servant
[illegible] Lieutenant

Newcastle Apl 22nd 1887

Jno Tilton Esq
Deputy Minister of Fisheries
Ottawa

Sir

I herewith enclose a list of the Applicants for Supplies of Stocked Ponds up to the present time, and as it is necessary that the Stock on hand should be cleared out of the hatchery at once, I submit the allotment for each Applicant as follows, subject to your approval - I have to quote out of the question to fill the quantities asked for by some of the Applicants (in some instances 10,000) they will have to accept such as can be reasonably given to them this season, retaining on the hopes that they can be fully supplied another season - The lots are as follows.

Name of Applicant	Locality	No.
Agent of J. C. Fort	Dalhousie	
Wm Clark Geo Kelly	Dorchester	
Election Mar. 10 Daniel Johnson	Jewetton

Department this year from 15th April to 15th May, but a certain number of Fishermen residing on, and about Hay Bay, an inlet of the Bay of Quinte, claim that as Pickerel only come into that locality to spawn, unless they are permitted to catch them then, they are prevented from obtaining there fish at any time, without going out into the larger, deeper water of the Bay of Quinte. No effort was put forth, that, the "close season" was an improper one or that, it was not the true period in which Pickerel spawned; all that seemed to be asked was that, as they were poor fishermen, and could not get these fish except when they came to their shore to lay their eggs, they thought the "close season" should be shortened so that they might be allowed 10 or 15 days during the present "close time" in which they could take some of these breeding fish:

From what information I obtained from Mr Sills the overseer, and from these fishermen, and from the practical knowledge which I have had myself, for the past

15 years of these fisheries, I feel perfectly safe in recommending to your Dept. that, No change whatever should be made in the present "Close Season for Pickerel or Bass" either in the water of the Bay of Quinte or

I may be permitted to mention here that, in 1836. 37 & 38 I resided in the then small Village of Napanee as a Clerk in a Store, and all my leisure hours were devoted to the fishing season in catching Pickerel, Black-Bass, and the large Red-Horse that then the Pickerel, came up there were then so numerous in the Spring months that the Farmers came there for their seed supplies of these fish, carrying them away by the waggon loads: I have seen them taken by the thousand in a night, — & at I then, as a boy began to get a night's good fish: The Napanee River, on the rapids just below the Village, near the grist mill, I have seen as many as 500 of these fish, taken and they very quickly spoiled, there was thousands, upon thousands, actually in heaps [illegible]

[illegible] they that [illegible] dips
of the Lucell [illegible] [illegible]
Canoes, [illegible] for 4 to 6 days
fish would be taken at one—
the 6-bass could be caught
here the shore a [illegible] another
with the hook [illegible] by the days
these fish were [illegible] then pro-
tected in any way; at market
and slaughter as [illegible] block.
Now what is the [illegible] these
net visited Napanee during last
to remain in it, beyond a few miles
till Wednesday last, when Senators
he old fishing ground [illegible]
nothing to [illegible] fish—
and was more than astonished
to learn that, on one Lucas
Holland, Decker, or Bass being
in the river for many years back.
all these fish had disappeared; the
result of our fishery laws during
these fish in [illegible] days, when
the rock of Spawn on the shore &
laid the foundation of [illegible]
and seen the small remnant of
these poor fish, yet found in other
parts of the Bay of Quinte, where
a proper close season is strictly
[illegible] their extermination—

are [illegible] caught to be wholly destroyed.
The greedy fisherman are [illegible]
protected by misstatement [illegible]
signing petitions for [illegible]
and by violating the fishery laws,
in order that he may gratify his
greed and avarice; And unless
the Fisheries Department at the
present day is determined to
[illegible] in a [illegible] during proper
close seasons by which the [illegible]
numbers of fish yet remaining
in our Waters, shall be [illegible]
from annihilation, or destruction
during their spawning time, the
Lakes & Ontario, and the
other Rivers in Canada will
be utterly [illegible] of these
fine [illegible] fish—

I am Sir
Your Obedt
Servt

Norcastle April 26 1887

Geo Tilton Esq
Deputy Minister of Fisheries
Ottawa

Sir.

I am favoured with your letter of 22nd inst relative to petitions from certain persons asking for the close season on cisco in the waters of Whitefish Bay in Lake Superior.

From our local position these petitions from fishermen and others asking for changes to be made in [illegible] lately established by your Dept, whilst they undoubtedly emanate from motives of self interest nevertheless show conclusively that the stand taken by your Department for the protection of fish during their breeding season is in the right direction for as the "close season" now formerly fishermen did not object [illegible] the simple fact that the close time did not cover the period when these fish came upon their spawning grounds and in the [illegible]

and consequently the Earliest time for their fishermen was actually the hottest spawning time in which the fish congregated closely together in the shallower waters and were therefore the more circumscribed limits of danger, hitherto, never ever, been selected in "plan or they ever sought for protection further than conservation.

It is alleged by the Petitioners "that, during after the 15th June there "were damages to the currently deposited "Spawn, than it would be by the catch "of fish previous to the 15th May." This allegation is in no case tenable, for as a rule the greater portion of the Spawn will have been hatched into fry, and from their minute power at that time, would pass [illegible] unheeded and not be otherwise injured by any Salmon net than more especially at the usual shallow spots where the Bass do spawn, they would not generally speaking be the places where Salmon would be handed Back on the other hand, if the Salmon were hauled over the beds previous to the 15th May, and Eggs were laid upon them, those Eggs would most certainly be wholly destroyed

and what would be still more disheartening by securing the female fish before the 15th May, the Fishermen would have taken with Eggs in them, [illegible] before there would be, when [illegible] to secure them ready secured to wholly abandonment and waste, giving no opportunity for either Spawn or fish, or Eggs to [illegible] their hands.

The Petitioners state that, the fishermen are [illegible] prefer to [illegible] after the Spawning season "they were allowed a couple of weeks "fishing in May." The necessary "Alteration" would prevent the [illegible] fishing to have gone into fresh Water Rivers for Bass, when they are [illegible] the Spawning season if Bass fishing [illegible] if Bass fishing will not allow there to remain the Country killing the Bass at the very time when they are leaping their Eggs over [illegible] their spawning, and at the time when the fishermen are [illegible] the Salmon on their fish, not fully pregnant, or spent, and consequently unwholesome for food, and [illegible] for the market.

In any event the Petitioners [illegible] not [illegible] there is

these provinces and would be necessary and
useful measures to be adopted in the general
interests of the public and especially
to by the Department whose office
is to protect and preserve the fisheries
in front of the shores to which they belong
of a date, never previously [illegible]
for the very fish which these Waters
are now observing or after fishing.

Hereby have an immediate
[illegible] to the advantages of this
"New Season" for those as a resource
the former state time, which were
quite forbid. They do not have
some knowledge of the regulations of
State Department of "New Season".
Let us give you the time when
a Depot in the Straits of [illegible]
about a month of time would permit
first [illegible] to obtain
[illegible] proper documents obtainable
relative to Michigan and other
States of the Union. Have heretofore
known some of the Reports, and speaks
readily at hand, and find the
following —

"The Laws say in the American
Reports that, May and June are the
months in which [illegible]

with the Shallow waters be spawn."

Reference to the paper read before the
Washington Territorial
Assn. gives the results of last season
and present observations of the
breeding grounds of the Herring.

"We give below an account showing
the catch was anticipated, since the Lake
showing the ice moved in towards
noon of this day after lingering on
the Ice Fields and, the Lake being very
[illegible] and constantly [illegible] by
the Steamer Ogden bordering the grey
[illegible] in the Straits for some days
[illegible] we were before they are fully
able to discern about, when the Herring
[illegible] to shallow waters
[illegible] the Shores to take care of themselves

"The Fishery Laws of New-
York, Vermont, and the Dominion
of Canada with regard to net fishing
for Herring are more severe
than enacted against hindering the
New Season being 16th April to
15th June & 14 days inclusive."
Numerous Replies.

The Ottawa U.S. Association
for the protection of fish & game held
their 10th Annual Meeting as follows
[illegible] that this Association

[illegible] Letters for Persons [illegible]
"to take & have in readiness made
by the Capt. of the U.S. Revenue Cutter
stationed in the Lake, & the Justices
of the Peace of the several Counties, on the
Lake respectively to prohibit & hinder
all persons from fishing within the Limits
aforesaid."

Remarks of Lord Lauderdale
of the State of New York.

Extracts from an Act
Regulating Fisheries.

"No Person shall catch or
kill any Black Bass, within
waters of Columbia County or in
the Counties of Essex, or Warren
between the 1st of January and the
1st July, or in Lake Champlain, or
Round Lake, between the 1st January
and 20th of July, or catch or kill
any Black Bass, Orange Bass or
Pickerel Pike, in any other waters
of the State, between the 1st of January
and the 1st of June"

From the extracts which I have picked up here
it will be seen that your
Deputation with Other Persons
for Peace is to assemble at

[illegible] Lake Champlain
[illegible] Lake Ontario
[illegible] Lake Erie

the adjoining State of New York,
and I trust such a state of
that, other States for the Union
are alike, correspondent.

I notice a remark in your
letter that "the Fisheries of Lake
Michigan Bay, where the Indians
carries do much." They expect
to state that, the Spawning season
for fish in Canadian Waters do not
vary, but in such a Bay as
can be hardly anticipated, certainly
not to effect in any way any
changes in the Establishment of close
Seasons for their Spawning &c for
their protection, their adoption
variation of the times of Spawning in
certain localities, will not avail
good, and is only made frequently
as a pretext for designing persons to
influence if possible your Depth
to make the close Seasons, suitable
to the speed of the fisherman, or
to the speed of the fisherman, where
the world be Spurtsmanship, where
sole object is selfishness for the present
irrespective of the welfare of the present
& future fisheries interests of the
Country.

Dear Sir

Your favour of yesterday
date to hand respecting the sailing
of Vessels, Steamers & Packets
to the North. - I can perceive by
an interest taken in the matter by
Jerrault & Mr Clarke as well as by
as far as in my power to comply
to you in every thing I can say
that a Vessel sails to Berwick,
the fishing smacks to Shields, or Sunder-
land commonly twice a week
Steamers to London every fortnight

Secretaries Office April 1797

Wm Wm Parker
Newcastle

Sir

I rec'd your letter and
as soon as you say you have
fixed upon the Batteaux Navigation
Kingston (Cataraqui) upon the
Bay of Quinte — and
Niagara — Lake Ontario — and
Fort Erie — Lake Erie — and
Fort Detroit — Lake Huron
Michilimackinac — Lake Michigan
Green Bay — Lake Michigan —

I am under the impression
that you would have found some
old Batteaux at Kingston, Oswego
Niagara, Detroit, Michilimackinac,
and Green Bay, & therefore
I do not know why you have
given yourself the trouble
to write for more.

Should the Batteaux
above mentioned, without further order
from them, they are to be put
in the most convenient manner
possible & transported to Fort Erie
Head of Lake Erie, there or Hamilton
and the Vessel you brought them
in to be sent to Niagara.

I cannot at present
say any thing with certainty
as to the

Ottawa May 7 '67

Sir

Referring to the conversation I had with you respecting the fitting up of the lower flat of the building now occupied by you, & intended for the Victoria Rifles, I beg to state that upon an examination of the premises the lower flat could be made very suitable for the proposed work provided with drainage, water closets &c. The latter would be suitable between the officers and other applicants for occupying on the north.

Should upon examination the lower floors which is still in my opinion, it be found dry & dry, with Earth closets &c. the basement floor should be occupied by the Rifles as a Drill Room, Armoury &c. the upper floor would be suitable for the Officers Mess, Quarters &c. The latter would be suitable for the Officers Mess, Quarters &c. The latter would be suitable for the Officers Mess, Quarters &c.

this will not however materially
affect the work, and provision
must be made by which the appear-
ance may be placed beneath Norman
Arch.

The walls to gain the cove
with wood, and some additional
timbers will have to be spread up
to the Southern wall:— The ceiling
need not be coved, as it would
reduce somewhat from the apparent
height of the room: the joyce and
flooring which forms the present
ceiling could be limed with
some light coloring, and give
the effect to the room there-
by it now wants and provides

The floor must be made to
Clark & be very well repair, and
should be wholly removed over
the floor made throughout of pine
covered with cement, or concrete
of some durable description.

The light pillars above
mentioned should be cased in,
in the manner as the walls.

A stationary staircase
to connect the lower and upper
floors of the building.

1887

Museum

Office of

A full supply of water is indispensably requisite to the necessary short time for the use and for the Hydrant — this can be readily obtained from the large water mains which runs immediately alongside the building.

When these arrangements and improvements in the lower floor of the building are fully completed the necessary apparatus in the way of shelving troughs, tanks and other appliances can be constructed and put in position

W. H Clarke
Officer in charge
South River Hatchery

Sir

As the Salmon fry will soon be ready for distribution from your Hatchery, I have been instructed from on behalf of the Minister of Fisheries that you will distribute them as follows.

Miramichi Co.

For J. H. Duncan, Inspector.		10,000
" Bass River		30,000
" Percival "		30,000
" Dumaresq "		30,000
" Ingram "		30,000
" North (Lot 10)		30,000
" Upper River		30,000
" Redbank "		20,000
" Northwest "	(230,000)	20,000

Kings Co

For North Lake Headwaters		30,000
" Cardigan River		30,000
" Millstream do	(90,000)	30,000
"		
		320,000

over

Queens Co

De Sable	River	20,000
West	a	50,000
North	a	50,000
Hillsboro	River & Mouth Nauvoo	60,000
Vernon	River	20,000
Cornell	d	20,000
Forest	do Lot 22.	20,000
Hope	a (270,000)	30,000
	Total duty	570,000

The above would be held to be a fair distribution of the supposed number of Spy Jaw you Hatchery

I must draw your attention to the very great necessity that exists for having these Fry put into the several streams in a most careful manner, by putting them in safe places for up the river, where the bottom of the streams would be most naturally adapted for the safety, and growth of the Fry — Some dissatisfaction has been evinced as to the manner in which your Young fish have hitherto been "dumped out here" into the streams, and without discovering such good judgment as should be given in the carrying out of a work which demands the utmost care, and

and attention, for a proper supply of Salmon in connection with the Young Salmon from your Establishment — Should additional assistance be required, I am sure the Government will readily grant it.

I am &c

Thomas Wilson

Newcastle May 13/67

Sir

I beg to acknowledge the receipt of your letter of the 10th inst. & the Hon. the Minister of Marine & Fisheries will be prepared to commence operations for the season — but it is of importance to the health of the Fry that they should be so disposed of, as not to be exposed to the heat of the sun during the period of their transit to the Ponds

All duties connected with the Fry office in your absence will be attended to by my Son Sir Thos Wilson

Yours

Recd 10 May 1889

Webster	"	" "	20.000
Pokeshaw	"	Charlotte "	12.000
Tobique	Rivers	Victoria "	6.000
St John	"	" "	
	Total distributed		387.000
Total No. of Fry sent to Grand Falls Hatchery			401.000

I am. Sir
Your obt. servant
[illegible]
for supt. F.C.

Mr. McKinney states that — "I have special pleasure in informing you that the Salmon Trout are successfully distributed in the Tobique River Restigouche."

Contract was a great
loss season. I cannot
account for the wonderful
percentage of loss at your
hatchery, unless it is that
your system of hatching
salmon fry is very differ
from the method adopted
at Grand Falls this year.

I am afraid that a
big percentage of your
failure has
been caused
by allowing the fry to
remain too long
in the
hatching

Annapolis July 28th 87

A. McNichol, Esq.
Bedford N.S.

Dear Sir.

In order that you may
see the contrast between the
successful hatching of the
salmon fry at Grand Falls
and the utter failure at
your Establishment, I
herewith forward to the
Fisheries Commissioners, for their
information, your Mr

Season. Here ye should never be cut
or allowed to remain one on the top of another
during the Planting Season. They also
require to be handled much more carefully
than any other fruit off, & be kept perfectly
Clean & free from Insects.

Arnold
Inspector

Newcastle May. 1887

Dear Mr Tilton

I am just a-rec'd Your note in re Perley's acct for accompanying me to the waters of the Tracadie. — Spare cash ordinary charges, and travelling expenses but Mr. [illegible] referred to, is for Perley's time and some hire of his rig; — I think the Dept should forward the money to Perley by the Minister forward the money to Perley. I got home last Friday & pretty well used up from that, and continuous travelling over a very extensive area of Country. — After coming down the Restigouche have visited the Reservoir at Metapedia-head a couple of days, to witness its practical utility, and especially watch the actions of the Salmon imprisoned in it, as regards their health &c. which I found Satisfactory; — I then went on to Dalhousie, and received word that the Minister of Marine at Quebec would arrive in the City the following day, when I had an interview with him, concerning this proposed Capture, and retaining of Salmon at the Hatchery; Mr Prefontaine requested me to look closely into the matter this Dept, and I have to forward a fair yearly detailed information later on. When proceeded to the Tracadie, where I found R. D. C. Allen

There are many matters in connection with this inspection which I think often appear different with personally, and the Minister might be more definite, and more heavily complaint, and my ill result in benefitting the speculation of your Dept in obtaining the desired to -

Either we I have given you an unofficial outline of my trip - intending forever to give a Report upon the whole subject which I am [illegible] to investigate together.

Yours
from many last
Lauder

P.S. Do do you have any of the Lerch Wardrum Reports & such. If so kindly send me as requested & if do kindly send me a list of the copies -

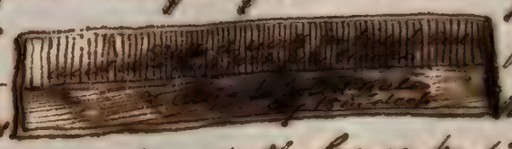
will fall into it, thus giving to the trout the benefit of the salt water, as well as the fresh; the curative qualities of the salt water, will keep the trout healthy, and prevent fungus on them.

My recollection of your hatchery, leads me to believe this could be done with little expense, and with easy applications.- for instance, the tank could be placed in the flume or outlet from the hatchery underneath the large platform, and placed at such a height as to receive the tide water when up, and to receive the fresh water from the higher elevation of the tanks in your hatchery:- in this way your fish would always be supplied with salt, & fresh water.

I would suggest the tanks to be made as follows say the entire length of the outlet from hatchery to the pond, which is as nearly as I can recollect about 30 feet long, by 7 or 8 feet wide and



some deep- 10 or 12 feet the tanks should be made of plank or boards the lower part to hold water so that the trout at all times would have say, 18 in deep to swim in, and

Sir

Yours duly received enclosing accounts which have been passed & sent on to Williams for payment — and to all of which I am,

Sir Your obt Servt

P. Stewart Secy (Pro Tem) Yours is merely the repetition, as your Supply of Provisions unexpectedly fell short of former Years. Should you have not employed your Nets in order to save a large number of Salmon — from the note which I see (if any) you may have met with after impounding your fish — let me know the state they are in, just time to know.—

Regarding your Fence Posts You have to cut about two — Rods will serve where Nets set this season, and perhaps three to obviate this, I have to suggest that, you make a large Tank and place it somewhere, where the tidal water will pass in & out of it every Day & so that when the tide is out, a stream of the fresh water from the Waterfall

3

the Netting or Nets such alone should be sufficiently close and high as to prevent fish from passing through, or setting over at high tide, or any other time, when at full tides the Tank would be filled with Salt water, and the fish then must perish at Once or soon after being supplied at plenty with fresh water — This arrangement carried I think be easily carried out with the application you little ingenuity, and it could be so simply and safely constructed, as to ensure the safety of the fish here Spawning time and would must materially to their benefit then, and redound Credit which must otherwise be experienced.

No Nets should be fixed wood, and well fastened to the Rock as shown in the sketch — I trust your intelligence, and ingenuity will fully comprehend my ideas, and that you can successfully execute the above suggestion — Let me know from you on the subject.

I am Yours
Most Obdt
Cavendish
Supt F.C.

fully concur, and much recommend the improvement be carried out by your Department— but in making such improvement, I am of opinion that a thorough change should be made in the manner of arrangement, whereby the space in the hatching room should be more economically used, and greater taste, and efficiency shewn, in the disposition of the stands, and frame work upon which the Automatic glass incubators are placed; and thus giving a more unique appearance to the room, and also giving to the employees at a glance, a full view of the numerous jars where filled with Eggs undergoing the process of incubation.

The large room on the lower flat originally intended for hatching purposes, has of late years been partly turned into rooms for dwelling purposes by the officer in charge; this not only lessens the space actually required for the incubators, and necessary tanks for holding the fry; but disfigures the whole appearance of the hatching room; added to this, is the unhealthy exhibit of many things connected with the experimental fee-

Newcastle Sept 17. 77

Geo Sitton Esq
Deputy Minister of Fisheries
Ottawa

Sir

Mr Peck - Officer in charge of the Sandwich that any water "closets" when repairs are to be commenced, and bucket closet that may be made &c."

It is absolutely necessary that such repairs and improvements should be made at the Dorchester Station in order to insure successful results for the ensuing season.

In a previous letter forwarded to your Department by Mr Perley, he also urged the necessity of fitting up the buildings there with new troughs, and to replace the old stands upon which the glass incubators are placed, with new ones, as the present ones are decaying away and unfitness for safe manipulating of the ova of the many jars which contain millions of Ova, and which it is expected will be largely increased in quantity during the approaching season of the White-fish & Herring work.

In view of the [illegible]

[illegible] will be required for [illegible] and Superintendence, - the cost of repairing the apparatus under the aforesaid improvements, will become about one thousand dollars; whilst the [illegible] work might be deferred until after the season for carrying it out.

Respecting the estimate of cost, for repairs and improvements, now forwarded herewith, I may further observe that the [illegible] of the Station should be thoroughly repaired before the [illegible] of the season, as the [illegible] of the Station is, [illegible] to prevent the [illegible] from being properly carried on.

I have the honor to be
Sir
Your obedient servant
[illegible]
Insp. Fish'ys

Newcastle May 6th 1857

The Secretary
Deputy Minister of Fisheries
Ottawa

Sir

I do received by your note
of the 4th instant enclosing me a Memo
of agreement which will cover the duties,
and the work required from Capt
Allen, in connection with the fishing
of fish Ways at Miramichi — the terms
are the same, as nearly as may be
for the same work performed by him
in 1855; and which was agreed to be
performed by Mr Fraser's last season;
but in which Mr Fraser's wholly failed
to carry out —

I cannot not support this
agreement to last beyond the present
season; unless at the pleasure of your
Dept — for all the full success of your
case is easily obtained in Chaleur Bay,
for, from opinions that, a larger class
of fish may be obtained thereby, and
certainly, at a somewhat earlier period;
in which case the Erection of Artificial fish
Cribs would be better served, in securing
a larger Standard of parent fish, and
an earlier hatching of the fry, in the

householder, and thereby perpetuate.

In view of fitting up this River
for as originally contemplated for fish
breeding purposes only (one which it is
now most desirable should be done)
other provision would necessarily have
to be made to communicate to the Grist
in charge and his family, as it is almost
strictly necessary that he should
reside within hearing, or immediately
alongside the building, in order that,
what watchfulness would at all times
be required by the person in charge of the
Grist, and during the hours of darkness
and thereby the rights and
duty, during the time of hatching the
immense quantities of Fish-fish, and
Salmon Fry annually hatched there in
the building.

This Act would entail the
construction of a house, or additions
to some kind to the present building, to
be fitted up for dwelling purposes for
the officer in charge — This enforcement
is very much objectionable
for the two most cogent reasons of the
Grist's Building — And whether
it would be held efficient by Your
Department to perform the whole duties
of watching the hatching of parent fish, and
thereby as a protection to the building

following Army; both of these objects of second would materially advance the success of the Artificial Cattle for Saturn Force —

Wm Fitton Esq
Deputy Minister of Returns
Ottawa

Sir

Referring to the matter of Capt. Allens claim for Capturing Salmon Trout at Martins, and for not Extending the time beyond the 30th of November, I may say that, after that time it has been found practically useless to continue the fishing, on account of the boisterous weather, and cannot say for certain that my Boat will be seriously injured, and consequently the Ova becoming unfit for Impregnation.

I fully agree with your remarks as to the Expediency that, your Department should not be placed in such a dependent position for all the Ova at the Georgian Bay, and may also add at any other point where it may be found desirable to operate.

In a conversation with Wm Charles Wilmot concerning the quantity of the Ova procured at Brighton, and there

obtained at Upper Arrow in Lake Ontario; the preference is found to be wholly in favor of the latter station, as far as size, and proximity of the nearest fish are concerned; and the very excellent healthiness of the Ova, and Fry of the fry hatched from them. These observations have been come to by myself, and are more endorsed by the Gentlemen and the Engineers in the Hatchery.

We hope to establish in deposits, and in correspondence with you the principal reasons for selecting the Georgian Bay as the Objective Location for procuring Ova for the Restoration and Stock of the Provincial fish and this present Year in the early Autumnal months in conjunction with the Upper Lake Fisheries, in the Lake Ontario; and thereby the desire of obtaining fish, most Economical Operation, which first suggested the Establishment of Upper Lake Fisheries, which proved to be Success in 1866, and Successfully in 1866, and with increased Arrangements will be observed during the Present Season Successfully in 1867.

In the Operations carried on at this Piscicultural Hatchery where Mr. [illegible] of the Salmon Trout from Upper Lake and Georgian Bay, have been found

those together for several years past Specimens has shown that the Fry from from Upper the Salmon fish are superiorly inferior to those obtained from the Upper Bay, and the former hatch and Emerge in the Spring are consequently more healthy and showing greater activity, they remain [illegible] for three [illegible] Months in the Spring, until [illegible] the Water attains the high temperature, whereas the [illegible] Fry [illegible] Lake in the Spring, and are fed & the higher Temperature of Water, which is found to be [illegible] [illegible] by the speedy absorption of the umbilical Sac, thereby discharging it's duty, and are [illegible] and Healthy, and [illegible] to [illegible] and the work of distribution

I [illegible] have written with more deliberation, and they are very important more to [illegible] of the Salmon species in Lake Ontario; and before a final decision is arrived at by [illegible] Department or the Local Government, I have to [illegible] to which means a timely You will know our dependent than ever in the matter of procuring Ova as and nothing in [illegible] Letter 22nd last, that a large number of complicated points

of the Nearton ground nets thoroughly overhauled and filled for deep fishing; and to employ a man thoroughly acquainted with setting, and working these nets, and home this Season the Tiger Island station to ascertain whether the ground is adapted for setting, and safely fishing this description of Net — and if so to put the net in operation as soon as possible.

This Experimental operation would not interfere with the arrangements already made with Capt Wilmot at Nearton, but would be the means of finally determining the question, as to the practicability of carrying on some of our own planned nets at Tiger Island; which if found satisfactory would I think be most expedient, and much to encouragement for your Department hereafter in the future; and at the same time be most advantageous to us as the Tiger Island fishery whereby the Department would be placed in a less dependent position for getting supplies of Cod Fish at the present time; and also for procuring frozen Lager and better stock of fish, than at Heaton.

I am &c Your Obdt
Lord Nelson

Nearton stored at Nearton and Elsewhere which might be utilized in connection with this work (that of procuring frozen fish) I have suggested that one of these nets be put into use this season at the Tiger Island fishery, in order to learn from the Experiment, whether your Dept might not establish that Station for Experimental operations in the future.— Several nets have never been landed at Tiger Island, the ordinary fleet not in the ready descriptive used there; and it has happened in some cases that, as Richd Loo & Son's fish have been taken in these fleet nets at one lifting, only a Dozen, or so of them would be found saleable to take Cape Town, the balance being either required for Spawning or decayed:— with a frozen net, which a catch, no fish would be found dead, and the same quantity would be obtained till orders for them stopped, and liberated again.

The above Experiment, if sanctioned by Your Dept, might be entered upon in this way— Instructions could be given to Mr Thos Nelmot, who has now become well acquainted with this Trap net fishing.

Yours

Newcastle Aug.th 24/84

To Wm Parker
Mchange of Hatchery
Sandwich

Sir

I sent you a copy of
letter received by me from the Dept
dated 19th Inst. to which I beg to
"Having reference to your
"Report on W Parkers request to erect
"Certain alterations & repairs to the
"Sandwich Hatchery and to build a
"Cottage for his residence; I am to
"request you to please send a detailed
"Statement of the Estimated Cost of
"the proposed additions, and changes
"to the Hatchery, without any reference
"to the dwelling house, when they
"shall be submitted to the
"Minister for his decision".

You will therefore please
obtain and send me a detail of what you may
think necessary to make the present
half of the border flat of the building
well suited for White fish hatching
with the view that the other half now
occupied by your dwelling shall at some
future time be fitted up in a similar
way; so that when completed the
two

flair shall give the appearance of
a well a dapted, and especially
as to, for carrying on Work
ing on the most approved,
and Economic scale: — it will
no doubt be considered necessary by
the Dept that, at some future time a
a Cottage or dwelling for the officer in
charge may be built — but at present
this is not attended to that could
be made alterations, and repairs
suitable for present work, of the
present part of the Establishment —"

Have therefore no the pleasure
to return you would support, as being
required in the way of New Stafing,
"to the Glass jars, necessary to supply
"by them with water &c. &c. to keep
"in the Young fish and such other
"matter as you think absolutely
necessary; also give a shorthand for the
probable cost of Each particular: —
It should you find that, with some
slight repair, you could get on this
season, so that the matter of thoroughly
fitting up the stable of the inside, and
building a dwelling could be urged
for another years Expenditure: — let us
hear quickly.

Referring to the matter of proposed improvements at the Gaudreau Hatchery – I have corresponded with Mr Parker on the subject, with the view to learn the probable cost of inside repairs without reference to the building of a dwelling for the Officer in charge, and I found that it would be difficult to make such general improvements for hatching purposes, as would be desired, without wholly upsetting the portion of the room now occupied by Mr Parker for dwelling purposes. In this view of the case I have to report the propriety of simply making such repairs, as will take over the coming winters operations, at a cost of $75 or $100: and that such repairs be left to be arranged that, they will fit in with any future Extended improvements that may be made next Season – Should it be decided that, sufficient means will be provided for making the proposed improvements referred to, it will be for the consideration of Mr Clapp for the Officer. I am Sir Your obedient Servant

Newcastle Sept 29th 1887

John Letten Esqre
Deputy Minister of Fisheries
Ottawa

Sir

In the matter of my inspection of the Ovoruacto waters in New Brunswick I beg to report as follows—

That, in accordance with your instructions I inspected in July last, the Ovoruacto river and its branches, with the view to examine, and report upon the adaptability of those streams, for re-peopening [illegible] and [illegible] in them; and to inspect the several Mill-dams, built across those rivers, and ascertain if it were feasible to construct fish-ways, or ladders through the dams, by which the migratory fishes could pass through these barriers, on to their natural spawning grounds above. —

The Ovoruacto river is a large tributary of the great St Johns river of New-Brunswick, and enters it about ten miles below the City of Fredericton, and runs almost wholly through the County of Sunbury. It has two large branches, together with numerous smaller feeders

feeders - These combined form a large and important river which for some twenty miles up from its outlet, is deep dull, and sluggish, and influenced by the tidal waters of the St John, and also navigable by large descriptions of vessels. The two large branches, are known as the North, and South rivers, the confluence of these into the main Oromucto, is called the "Forks".

The North branch of the Oromucto takes its rise from Oromucto Lake, a somewhat large, and picturesque body of water some twelve miles long, and about five miles wide, situated in the County of York; the outlet of this Lake, forms the commencement of the North branch of the Oromucto river, which flows with a rapid current when not obstructed by Mill dams, over a gravelly bed for some twenty six miles to the "Forks" or confluence with the South branch.

The South branch of the Oromucto principally feed from a small Lake in the interior, and after running some distance over a number of broken ledges of rock, making a series of cascades of some thirty feet in all: these falls at present, form an impassable barrier to the ascent of Salmon, and other fish;

the falls are about Eight miles up from the "forks" or confluence with the North branch of the Oromucto.

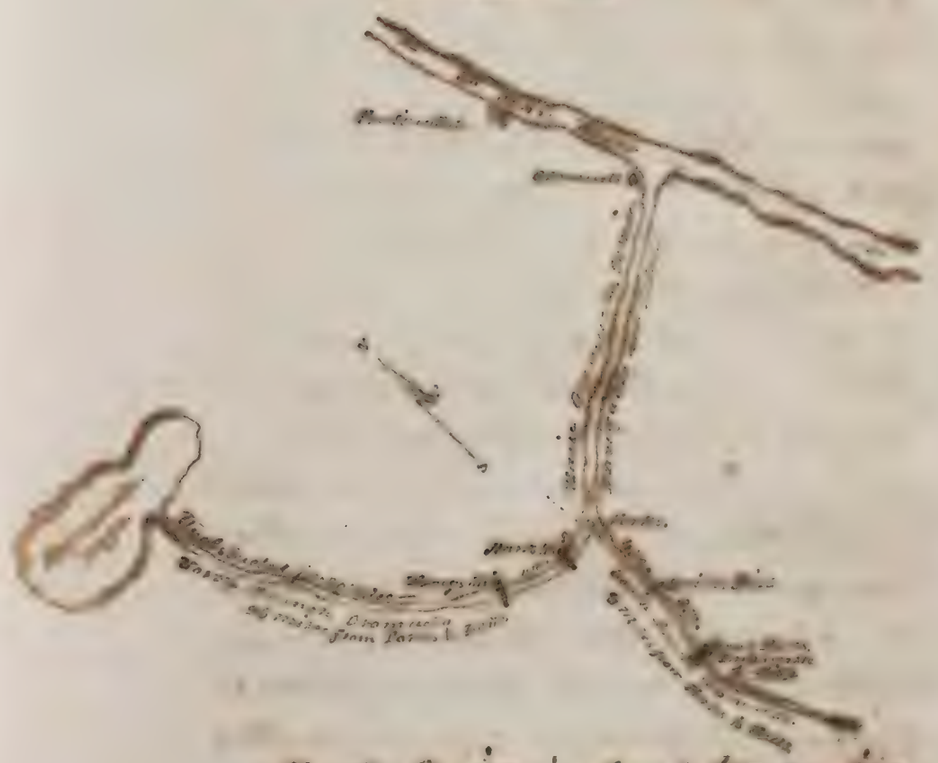
Artificial Barriers

The North branch of the Oromucto in its run of twenty six miles has upon it two Mill-dams; One two miles above the forks" called Nevers Mills; the other dam, four miles further up known as Searey's Mills; except for these two Mill dams, this river would have a free, and open course, from Oromucto Lake to the forks, thence by the main Oromucto into the St John River down to the Sea: The South Oromucto with its run of Eight miles from the falls downwards, has across it a Dam which drives Smiths Saw Mill situated four miles above the "forks": In every other respect this branch is free and unobstructed through to the St John river, and thence to the Sea.

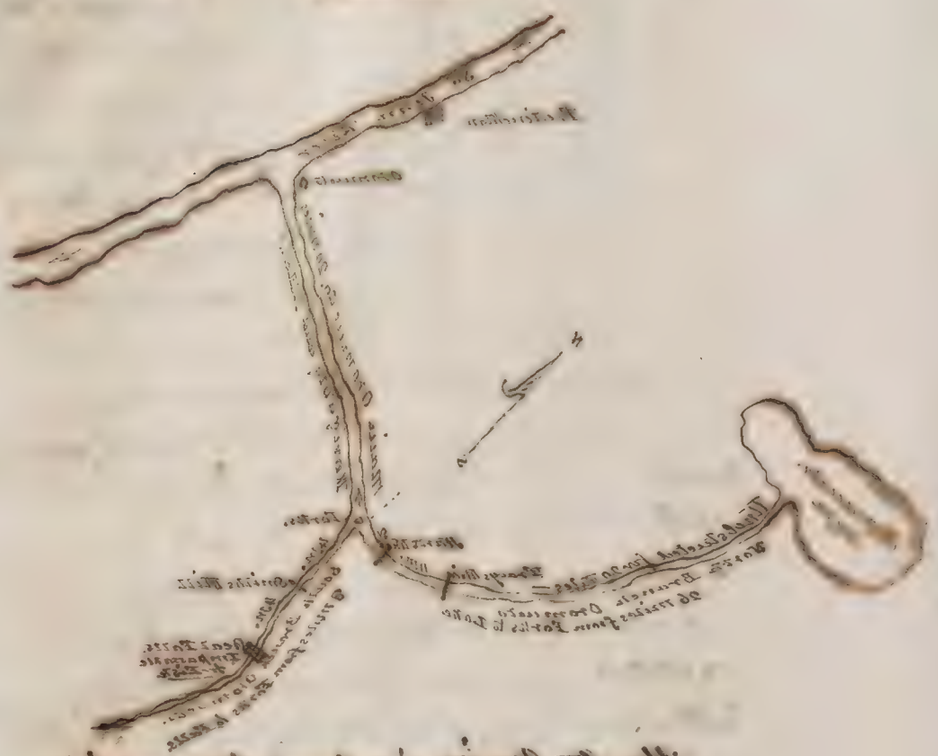
The Dams across both the North, and South branches, being both of wooden structure, and of moderate height, offer easy means for building fish ways, or ladders through them, in which case, Salmon, and Gaspereaux would ascend these dams, and

and pass upwards to their natural breeding grounds, which are quite extensive and well adapted for this purpose throughout the whole length of these tributary streams to the water of the main stream the Nashwaak; the present appearance of the banks of both these rivers presents the most satisfactory evidences of their being great resorts in former years for salmon, and [illegible] and the most feasible passages are given by the settlers, and others, of these fish abounding in these streams in former years until the dams were built across them; which as a natural consequence these migratory fishes have prevented from reaching their spawning grounds & reproducing their species and therefore it is now found that from the above mentioned causes these fine fishes which were at one time plenty as food, and wealth for the people in that section of New Brunswick, have now become wholly barren of fish and unproductive of any means for giving the inhabitants any description of fish-food or traffic in fish.

Situation of Mills and Condition of their Dams.



Harts Mill is about two miles above the Forks on the North branch, and was originally built for driving a large saw Mill, but is now only used to work a small grist mill; with the former extended state of the water under proof, this saw Mill has been abandoned, and is now rotting to the ground; and the poisonous effects of its refuse & sawdust, and Mill outlet, which used always to run into the stream in former times, is now abated; the dam still remains a fairly substantial built structure, &



from over every passage of the
said fishermen through them.

(2) And that section 2 of Section 18
of the Victoria Act of 1865, be amended by
"repealing the Proviso therein
as to the Rivers, and which Proviso is
hereby repealed, and the Governor in Council
may from time to time declare
by Proclamation the Rivers
to which any such Proclamation should
be applied from the commencing of the
next ensuing fishing season
and not before, and that the
Proclamation, if not revoked for the previous
season."

(3) That the fish-pass known as
Rogers Patent fish pass, is more suitable
to the Rock adopted for carrying the
migratory fishes through Dams
across Rivers, and that the same be built in the
Government Dams across Rivers, at the public
expense whenever required.

(4) That the Government Dams
across the Metgermette, the North, and
South Branches, the Restigouche river,
and all other Rivers, together with
Dams made by, and for the use of
Lumbermen, and for the use of
the public generally, should be
kept in repair by the Government
and Overseers appointed for the purpose
and paid by the Government, the
Lumbermen interested in

6

Dams, and the proprietors of Mills
on the said Rivers, the amount
of their respective
fish passages, and the construction of the
fish passages thereon, and the
annually,
and faithfully carried out.

(5) That it be strictly impressed upon
the Police, the Game and Fishery Officers
and other persons within the Province
Officers and others, and the penalty,
for neglect thereof to any Fishery Officer
satisfactory evidence; they are not only
to witness, but also to assist
in detecting the offenders, and
to give such information to the
Officers, as may enable them
to prosecute such offenders
and to recover the penalty
by law imposed.

(6) That the taking of the above Crustaceans
during the months of June, July,
and August, should be stopped, and
by official inspection of Fishery Officers
may be granted in the open season of the
year, during the month of September,
say a certain number of days in each week,
of which these Crustaceans might again be
taken for the inhabitants use, and for the public
market; — that the above fish-ways
being built, so that the fish may
at all times pass up the streams
to their spawning grounds, it might
take, for the necessary purposes, it might

safely calculated in the ordinary course of events that such a block house would shelter the very people for which it was erected against the attacks of the Indians, and in this way the general safety became subservient to the interests of the Contractor, who might have saved his pocket, and sacrificed the people, as in former times.

Sir

Referring to former
Official communications & letters relative to
Contracts for a Light House at the
Head Mr. Harris of Manistique Co,
is desirous of the Contract for
building & the Keeper of said Light House
which I have every reason to believe
have proved the Most responsible

The Specifications for the
following Light House will be forwarded
from Washington City as early hereafter
will admit of doing so, and in as
brief a manner as possible.

(1) Do you consider it practicable to
open such an Arm, and thus
which Coal have become known?
Reasons I do not consider it prac-
ticable to open the Coal fields
west of the Arm with Coal produced
by waterpower because about two miles

(3) Do you consider Protestants a good field, having a desirable habitat?

Answer: The geographical limits of the Province of Prince Edward Island, being circumscribed, agricultural settlements extend principally around the shores of the Island. The North Shore is called the Arable Country, beyond which the land is not generally found to possess sufficient depth of soil to grow wheat, the Country of the Province. The South Shore is called the Grazing Country, and the best adapted for sheep farming. Many Protestant families have settled on the Island, and are doing well.

(4) What is the number of the Roman Catholic Population of Prince Edward Island, and the Counties of the Province?

Answer: I have not exact data at my disposal whereby I could answer this question, but I refer to the Census of the Province, which I have no doubt will be found correct, and which shows the Roman Catholic Population of the Island, and the Counties of the Province.

12.

71

(7) What would be the probable cost of a battery sufficient for our purposes

Answer:— The cost of an establishment for discovering that point by experiment we have named would be very difficult to ascertain as until the powers of ships were tried it would be the experts opinion & an estimate as additional cost from repeating the cost of breaking, [illegible] or replacing many kinds of shot upon by Dover & Portsmouth or by the Medway shot as those formerly used would probably be very considerable. Colonel Jones knows that the company on shore used on board of a steam vessel, might be obtained with, [illegible] the powder would be formed either at Dover Woolwich Carriages and other Stores Cost [illegible] powder and shot powder would be [illegible] would be carried by [illegible] a steam packet to the [illegible] the water is conveyed into the Mill field battery at Dover would the most [illegible] probably would [illegible] considerable would be [illegible] for practice [illegible]

Mr Ellen Esq
Deputy Surveyor of Customs
Oswego

Sir

Pursuant to your Letter of the 2nd Inst. directing me to make a particular survey of the premises occupied by Mr Smith on the North side of the River Oswego, and to report my opinion of the most convenient place for erecting a Store to contain Salt, I have accordingly done so, and find that the most convenient place for erecting a Store for the reception of Salt, is on the vacant piece of ground adjoining Mr Smith's Store, and fronting the River, which piece of ground is bounded on the East by the Street leading to the Bridge, on the West by Mr Smith's Store, on the North by the River, and on the South by the Street leading to the Bridge, and contains in front on the River 60 feet, and in depth 80 feet.

The Store I would propose to be erected on the piece of ground above described, should be 40 feet in front on the River, and 60 feet in depth, and two stories high, with a Cellar under the whole of the building, and a Platform in front of the Store on the River, of the same length as the Store, and 12 feet wide, with a Flight of Steps at each end of the Platform, leading down to the River.

The Store should be built of Stone, and the Cellar Walls should be 3 feet thick, and the Walls of the Store 2 feet thick, and the Platform should be laid with Flagging Stones.

The Store should be divided into two Rooms on each floor, with a Partition of Brick between the Rooms, and a Brick Chimney in each Room.

The Store should have a Door in front on the River, and a Door in the rear, and a Window in each end of the Store on the first floor, and two Windows in each end of the Store on the second floor, and a Window in each end of the Cellar, and a Window in each Room on the second floor in front on the River, and a Window in each Room on the second floor in the rear of the Store.

The Store should be covered with Shingles, and the Roof should project 2 feet over the Walls of the Store, and the Gable ends of the Roof should project 1 foot over the Walls of the Store.

The Store should have a Cupola on the Roof, with a Window in each side of the Cupola, and a Flagstaff on the top of the Cupola.

The Store should have a Door in front on the River, and a Door in the rear, and a Window in each end of the Store on the first floor, and two Windows in each end of the Store on the second floor, and a Window in each end of the Cellar, and a Window in each Room on the second floor in front on the River, and a Window in each Room on the second floor in the rear of the Store.

The Store should be covered with Shingles, and the Roof should project 2 feet over the Walls of the Store, and the Gable ends of the Roof should project 1 foot over the Walls of the Store.

The Store should have a Cupola on the Roof, with a Window in each side of the Cupola, and a Flagstaff on the top of the Cupola.

Ottawa Oct 31. 87

Jno Tilton Esq
Deputy Minister of Fisheries
Ottawa

Sir

Referring to certain necessary improvements and changes required in the present Fish-Museum building, and the proposed filling up of the lower flat for fish-handling purposes; I have to report that, in order of making the Institution fully complete, it will be necessary that as much space as possible shall be set-aside for the display of stuffed, and Alcoholic specimens of fishes, as at the present time, it is found that the ground flat is too much crowded to satisfactorily display the collections now on hand there, and elsewhere, and such other specimens as it is in contemplation to obtain during the coming, and following years.

To remove the present Exhibit of Nets, and other fishing gear from amongst the Fish Exhibit proper to the upper flat of the building, would overcome the difficulty of over crowding referred to; which state of things must

greatly increase, should the removal of Nets be not take place.

The interesting (as it were) of the present unique and valuable Specimens of fish mounted by Taxidermy, and preserved in Alcohol, along with Boats, Nets, fishing gear and the various appliances in fishery matters, would greatly nullify the particular objects for which a complete Fish-Museum is intended to cover.

This would be more particularly felt with many of the collections now on hand as standing in the foremost position for superiority at the Great International Exhibition London 1883, and the Colonial Exhibition 1886, and thus entitling the collection to a proper display in the Canadian Fish-Museum.

Having devoted much time, and special care in collecting, and mounting many of the above Specimens, and some of the appliances, and Machinery now on hand; and feeling deeply interested on behalf of Your Department that the present building lately devoted for a Fish Museum, and for practical

Fish-breeding purposes should be
expressly utilized, and suitably arranged
for a complete display of Fish. Industry;
I have to suggest that the upper storey
of the building be wholly devoted to the
Exhibits of Nets of all kinds, models of
Boats, and fishing Gear generally.

That the ground floor be expressly
used for Mounted Specimens of fishes,
and for Alcoholic and other scientific
modes of preserving fish. and

That the lower or cellar flat be
fitted up hereafter for carrying on
Artificial propagation of fish by the
most approved methods, where space
will be found for hatching many
millions of fry annually.

It will be needless for me to
offer to your Department any further
evidence of the great and increasing
popularity of the present Fishery
Exhibit, than to refer to the daily Register
of visitors to that Institution, which shows
by the names found with Legislators,
Scientists, and thousands of their
fellowmen of the public generally,
give the strongest evidence of the
increasing interest taken in this
Museum, as a resort for obtaining in-
formation, and practical knowledge

the great sources of wealth obtainable from the waters of the Dominion.

I trust therefore Your Department will see fit, to set aside the whole of the building absolutely for a Museum of Fish, and Fishery appliances in the manner above suggested; in which case I feel quite assured the whole work will redound to the credit of Your Department, and to the Country at large.

John Sutton Esq^r
Dep^y Minister of Marine
Ottawa

Sir I forward herewith a letter from Mr Thos Morrat of B.C. in which he supports Lieut Dorey for Brother Maxwell (who has been very ill for some time) to take charge of a greater number of Egg than first contemplated, and that, pending the return of B.C. they shall open his station at B.C. Dorey backwith him a lot of the Atlantic Salmon Eggs — There is no doubt that the Ova would arrive here more safely if on the charge of some one specially caring for them en-route

such as a matter of small Expense would be sustained, I refer the matter for your consideration - If you remember when at Ottawa we spoke of selling over a quantity of the Carmine Egg, - and I distinctly heard it said Lorne, and also saw him speak over as to mode of shipment, and of packing them - Hearst now says he can readily spare a small number and speaks for some Foreign - If you think all of the proper let me know and I will arrange accordingly

Should the increased number Jocko be brought over, room might be found for them, say at the Victoria Hatchery, and at some of the other Lower Provinces. Establishments

I could not advise to

keep a number as Jocko at the South from B.C. without some Person Messenger coming with them as he with us - be too great - with 2 or 300 day in one pen Cages than would be less chance of loss - Steamers after reaching Montreal better you may decide to have Mr. Hearst bring a very few of each quality, but in any case let me know your decision at once -

Sincerely yours

Sirs

I am in receipt of your several accounts, which upon the whole appear wonderfully extravagant both as regards the appearance of the work and the expence incurred in carrying it out - I need not ~~[illegible]~~ say I spend lavishly on this description of work when I have often expended what I consider but trumpery outlines as compared to yours - My attention has been often drawn - to the apparently extravagance connected with your work & the Department - and I have been frequently ordered to examine more closely the accounts sent in.

Your New Year and Xmas cards have arrived - Your house has been very busy indeed, - the prices which you charge in the "Circular" are not regulated in any other part of the Dominions, and there appears to be a sort of lavish Expenditure which you do not desire, or appear anxious to reduce - Would that passed

Yours Truly so far I cannot say [illegible]

Newcastle Decr 29th 87

John Sutton Esqr
Deputy Minister of Fisheries
Ottawa

Sir

I beg to draw the early attention of your Department to the subject of renewing the Salmon Stations on the Eastern of the Restigouche here known as "Hatfield" and "Dickson" Stations. It is very important that if any arrangements are to be made they should be perfected at once, as the time has arrived when the owners of these Stands will be making their final arrangements for next season for fishing.

It will be found Upon Enquiry with the present understanding with the occupants of the Stations where your Department has been receiving Salmon during the past few years, will be discontinued, as the Fishermen claim that, with the exception of such necessary to obtain the Salmon for the hatching purposes, they cannot be spared as they fish exclusively, and therefore they claim that, it is

Yours

in view as possible – You say "the fishermen are now Salmon fresh that the Hatcheries are having food" – well let them or some of them be made Hatchmasters as before and put it – You report – If you look at my report of last year you will see there the Miramichi fishermen give their ideas for Protection – You ought to get something of the kind also.

The Queen vs Hatfield is clear and the Deeds show it that the Fishery in Bonaventure Island belongs wholly and exclusively to the Department, and that Banks or no one else can fish there unless with the Consent of the Dept. You will therefore bear this in mind in the future, and do nothing whatever that will complicate the rights of the Dept to the Port Blanc Island Fisheries – I cannot send you home for days, say a Dozen as you require them –

I am Yours truly

Signed

[illegible] to find a suitable [illegible]
publications.

Under these circumstances
I have come decidedly to recommend
Your Lordship to cause such steps to be
taken with all practicable, dispatch, whereby
full dispositions may be made in time
for obtaining the necessary stock
of Herring Salmon for the ensuing
Fishery.

I accordingly submit that Her
Majesty has made an offer of Protection
to Your Lordship for 10, or 20 years,
at £100 per Annum with the privilege
of fishing the Fish from the mouth of
the River during the fishing season; during which
said Vessels employed in the
said Fishery should be the best of the
Fishing stations. I would recommend
these persons to be employed
the locality where it is [illegible]
from [illegible] returned during the years
1885-86-87 an average of
So [illegible] of Fishermen
[illegible] about 650 fishing
[illegible] arranged each, and
[illegible] to Latter in the season,
[illegible] I no doubt from
[illegible] upon any day 15

In addition to the Vessels
I would also recommend procuring
the requisite stores at Thurso or the
Reckan[illegible] Stores, which has hitherto
been handed over by your Lordship
to the care of the Reckan Inn at Over-
ghaist. and is controlled by the Priest
who should at least give for the benefit
of the Fishings for these [illegible]

From information received
by Mr Miller Manager Mrs Mackintosh
I have to be widely estimated from the
Priest - but it is very to provide stock
the arrangements therefor in the district
above and before it have to [illegible] the
fishing for good reason -

The Fishermen employed by
Messrs Thomas and Mackintosh
pretty employed from the Fish merchants
for they rely upon getting a very better
for every description of labourers during
the coming season, and then to obtain
from the present uncertainty consequent
upon getting fish from the stations
formed by other persons, whose interests
clash very materially with ours over
is the means adopted for capturing the
labourers without serious injury from
the usual fish net used, which injuries
too frequently to the death of the fish.

I beg to enclose herewith a letter from Mr Alex Rennet touching upon this subject, & which he spoke lately of the "Fraser" steamer, and shall take early opportunity of the 22nd Inst. to make this Letter Statement & fully report & with Returns for upon the grounds he last mentioned by myself. I know that the 22nd Inst. Steamer will carry Mails & Passengers on account of Timber Berths, which are filled in from of them; from this fact these Stations could be attended with a Steamer both, as easy upon each to obtain the Returns said would be prevented by this course.

I cannot see they or from what source any Restriction should have been made by your Department to the 22nd Inst. Steamer, for it must upon your Clear being as possessing any practical knowledge of the coast & your duty to supply the Certificate necessary with your Returns that the 22nd Steamer would prove about useless for such purposes.

In conclusion I would wish upon your Department to give immediate instructions to the "Fraser" and Indian Salmon Stations and make such provision for this

satisfactory working by our own Employees never desirous, as may be considered most advisable for the economy:— To facilitate this matter before it may be too late, I would respectfully request that Returns should be ordered to be taken upon these Stations as speedily as possible —

In the Leasing of these Stations I beg to suggest that the provisions of any Lease, or Rental should be such, as not to prejudice any right Your Department may have in the Salmon fishing Stations, at the Entry of the Restigouche River, or in any part of the Bay des Chaleur.

I have the honor
to be

C.O.D.
from
Ottawa
about the
1st of
March
next.

Fishing stations upon the Pacific coast, which should have been kept by your fort as they came within their bounds at the time of the cession of Louisiana to the United States. Set aside for the natural and artificial propagation of Salmon" This was my recommendation many years ago, and was complied with by the Dem" fort: but now your fort have leased them for the fishing purposes, and I know that many Salmon are taken in the Rivers

last year, and it is completely by the lessees prospect that there will more fully another year

It is now becoming a question of serious consideration by the Dem" fort whether it were of your having these two branches, and not rendering aid for preserving their natural nurseries, it may not close up altogether hatching on the Pacific coast, from which all they are at present they receive no financial benefits whatever

If your fort were to reach them half way and buy, or receive wholly from

any kind of fishing
Whatever the Redpriest or
the Potatipeedie is, which the
Dorn fork will carry on
largely Artificial Breeding
and Stock annually the
Ocean parts of the Patapsco
then both fork would be
acting in Concert, and
each would reap Mutual
benefits – Yours, to the Inestimable
Value of the Rivers fishing, and
thus is the opening up of more
Extensive Commercial fishing
in the Tidal waters – I can
assure Your people come
to this, or some such fair
view; as an Inducement

is everything that will
Encourage the Restaurant
of Artificial fish breeding
from the Potatipeedie

Your own Experience
and good judgment
cannot but see the
Equity in this view of
the matter, and I sincerely
hope you would urge
the adoption of the Plan
thus Cursorily penned
by me – Your Majesty

Sept 28 88.

Sir,

I am directed by the Commissioners of Fisheries to acquaint you that they have had under consideration the Report of the Inspector of the Scotch Fishery Districts for the year 1887, and the Memorials from the Fishery Boards of Wick, Peterhead, Fraserburgh, Banff, Buckie, Lossiemouth, Findochty, Portknockie, Cullen, Portsoy, Whitehills, Macduff, Aberdeen, Stonehaven, Montrose, Arbroath, Anstruther, Dunbar, Eyemouth, Berwick, Burntisland, Granton, Newhaven, Fisherrow, Dysart, Pittenweem, Anstruther, Crail, Kilrenny, Cellardyke, Buckhaven, Methil, Leven, Elie, Anstruther, Pittenweem, St Monans, Newburgh, Arbroath, Montrose, Stonehaven, Aberdeen, Macduff, Whitehills, Portsoy, Cullen, Findochty, Portknockie, Buckie, Banff, Fraserburgh, Peterhead, Wick, Lossiemouth

forward immediately a detailed Statement showing the catch of each Station each Station."

It will then appear from the Departmental instructions that the Inspector Station is not to be named, but that some other more Station may be prospected by you between the Inspector Stations or if found advisable, below Inspector, & that you are to forward to me immediately these reports on those newly proposed places and also the cost of erecting such Stations to be borne by you.

With you are well acquainted with these localities, you are to be better able to decide as to their advisability for the purposes required - & if it may be that Inspector the form a Government Station Head quarters, & prepare and work such new Stations as are proposed by the Dept.

You are somewhat of opinion however that it may be necessary to establish a new Station between Inspector and the Indian Steam on account of the location of the Steam Mills and the annoyance connected with them in shipping & receiving

Wm!

What may be done before Inspector you will be able to judge better than I can, but I should suppose that any such Station Inspector would necessarily change the catch in this, and would create some feeling, but this unpleasantness would amount to nothing so far as the Dept is concerned as it would have a perfect right to act as and wherever it pleased, but any consequences of many kinds might be apprehended in erecting a Net Yard below Inspector, as we should Inspector and others would feel much put out by the fish temporarily resting a net where the had not been fished before - however you the matters are to forward at once your Returns and also the cost of erecting such a Station which must include the expense of procuring nets and all the requirements to carry on the work in the best possible Order. In the Statement of prices you will have to take into Consideration the facilities for transferring the Salmon from the

locations, Especially the Coast of Fraser
for I suppose it could not be done in the
latter case by means of force and seeing
as you were in the habit of doing at the
Stations in former years - all this must
be clearly shewn in your detailed Statement
asked for by the Department.

I presume the principal Grievance
back to the Dept. for taking Fraser Station
at a Locality from Mine, would be the probable
admission of Fraser right to the fishery this
the Dept justly claim to be wholly without in
the Government. The fact of Fraser or another
fishermen fishing a station for any period
of time previously does not give them any
legal or just Rights thereto, their occupation has
only been a passing privilege granted by
the Dept from year to year - & previous to
there not give any fishing rights to owners
in tidal waters -

I simply now ask for information
whether any arrangement could be made
with Fraser by which he would fish
his Stand with such nets as you would
require, and sell his fish at the Packers
Price or such Value as might be agreed
upon, with the understanding that you
will buy the fish - & could you do

arrange

with any person that might
become the lessee of Fraser Stand or
rather the owner of his Station for he
cannot sublet his fishing rights from
the Dept without written Consent -

In Conclusion You must
give as clear a Statement as possible
of the best means of procuring your
present Salmon, whether in procuring
New Stations for the Dept, or in working
those you hold as previous yr and
Attend to these matters
And let me know as soon as
You can what you think both

July 1st 88

Sir Sidney Dickson Esq.
Deputy Minister of Fisheries
Ottawa

Sir

Referring to the application made by yourself & Associates of the Bedford Nursery for a supply of Salmon Roe, and White-fish Eggs, I beg to state that it would be advisable to comply with the request, as at the present time there is in this Nursery a quantity of Salt-Trout Eggs for which it would be desirable to obtain a market, especially as they are now actively hatching with the Embryo visible there, & at which season space is required for a healthy development of the Eggs. There is necessary at the earliest stages of incubation.

A greater quantity of Eggs was collected at Tignish Lake, & at Miminegash than was necessary to satisfy the requirements of this hatchery alone - but it was intended that a certain number of the Eggs, when they arrived at the proper stage for transhipment, would be sent to those parts to hatch in the Maritime Provinces. The establishment

More particularly intended to be supplied with those semi-hatched Forest-Eggs were, the Bedford, St Johns, and Mayor Hatcheries with this view I had proposed sending to the Mayor Nursery a larger number, as no Effort was made to collect Eggs for this Institution, in the matter of the Eastern Townships but deference was wholly placed upon getting them full supply here.

Salmon, and White fish Eggs were sent to the Bedford, and St Johns Hatcheries, last year, and it was in contemplation to repeat the operation this season. and I now make Enquiry from your Department, whether this event shall be carried out.- The precise time for making the transfer of the Eggs will be during the present month of February -

W. A. Bellmont requests that, he may be permitted to serve for the Bedford supply of Eggs - It is advisable that he should, for it would be absolutely unsafe, to ship over that distance, without being followed in charge of some person, practically acquainted with the carriage, and management of them - This Mr Bellmont request is a reasonable one since the Eggs be put in - for unless he comes someone will have to go with them - I would therefore suggest that his request be granted.

John Sutton Esqr.
Deputy Minister of Fisheries
Ottawa

Sir

Referring to the subject
of procuring Salmon in the estuary
of the Restigouche river, for supplying
the Government Hatcheries with Ova;
I have to state that, in accordance with
your directions I corresponded with Mr
Alex Murdoch, and have obtained from
him the following information on the
subject, together with a Statement of the
cost of working any new Stations that
it may be decided upon to secure. The
Indian Mission Station is one which
it would appear is intended to be used,
& I therefore give probable cost, viz
Cost of 250 fathoms of Net @ 7$ $187.50
" 400 Stakes for Net @ 6 — 24.00
" 2 Canoe and 4 Oars — 20.00
" Bottoms for the Boats & Seats — 20.00
" 2 Men from the 15th June to 10th July
fishing and attending to Nets &c
@ $50 per diem — 165.00
Total for Mission Net. $ 416.50

This work of working the Mission Station, would be about the same as for working any other New Stations that may be chosen. But in addition, there would be a necessity for obtaining a small sum for general work in connection with these Stations. The cost of which would be ... $50.00

Add two many keys, and a team for same, to collect and convey fish to the Reservoir for Hatching, would amount to $250.00 $250.00

Add cost of working Mission, and two other Stations, is $346.00 1384.00

do do, as for State and Private ——

Total for 3 Hatching Establishments $1684.00

With regard to the location of any New Stations other than the Mission Stand, with the possible exception of conveying the salmon ova from the Reservoir, it would be impossible to locate a Rack below the Fraser Stand, as it would be impossible to reach such Rack with the ordinary teams, and it may be said there can be no suitable places for such Rack, on account of the Mud Flats, and the Cove below Fraser's. Next to go still further East, that is below Station No 7 on the plan, it would be

impossible to transport the Salmon that distance to the Hatching House with the Hatching House so far from this important work.

The only alternative then, after giving up the Fraser Station Rack, and any Station Eastward, is to prospect up river Eastward, where the ova was procured. Now between the two named, would be found not only Spawning Grounds, but also wholly available for the purpose required, by reason of a large Clear Water Stream coming in from the North, called Mud Creek, and the Mouth of the Harrison River, and the Mission Stand. The landing and unloading of Boats, and the floating of Boats, would be easy and the Location convenient of the Hatching House right on the Mission Stand, would be the most suitable place for a Rack for catching, and storing the Salmon ova for the purpose required.

The most and only suitable and available Location for the Rack would be at the Mouth of Mud Creek, which is from Mission Station No 8, and No 9, which are two Islands by Stand, and there would be a Rack on the North, or East side of the River; and this would be a little

arrangement necessary to secure a successful result to the undertaking.

I remain
Yours truly
Lieut Colonel
Supt.

P.S. The Gentlemen through the account sent in for the purchase, and carriage of present Salmon to the Channey found that it came a little under £150 Sterl. have paid out.— The amount estimated for the cost of Nets, Stakes, and all expenses for fishing 3 Stations, wages for men to fish them, and for conveying the fish to the retaining pond, all put together amounts to £1549 Stg.— From this it will be seen that, the amount of money paid for our Supply of present Salmon would have established, and fully equipped three Government Stations with new Nets, necessary for fishing, and conveying fish to pond, and pay for men's wages for the Season work; and would no doubt, have given us the same number of Salmon, (400) for Spawning purposes. Whereas those the plan now recommended to adopted.

and the Stations prove satisfactory in the Catching of a reasonable number of fish, which at the lowest estimate ought not to be less than the 400 of this years catch, (but probably One half more) their cost to the Department might be considered as nothing more than the actual working of the Nets, for the Nets, and plant would be on hand to represent the money invested in the undertaking. If the purchase of the 400 Salmon can be counted at £1000 Stg inclusive of their conveyance to the pond of about £500, (which would really be cheap) then, upon this basis of calculation the same number of Salmon taken by the means proposed, would cost only £500 Stg: and if it should so happen that, any greater number of fish were taken, their cost would not be increased; but by the system adopted the next season, such additional fish over the 400 would add £250 to the expenditure.

Sir

In reference to your letter
of the 9th inst. forwarding your account with Estimates
for boats and working Nets &c for the
Restigouche Fishery District, I may say that
I agree with you in the plans suggested and have recommended the
Department to proceed with the work.

It seems however that the
plans is not accepted by the Dept,
and I am directed to instruct you
to make the necessary preparations to
fish the Hedden Point Weirs, and at
the same time arrange for the purchase
of parent fish from neighbouring streams
in the same manner as was done last
year.

You will therefore proceed
to

be under upon this work at once with the view to making such arrangements as will fully supply your want of parent Sewers for the area of your Salisbury – Whilst I should have preferred to have had permanent Stations under our own control and worked by our own men throughout – it appears the Dept does not see fit to carry out this plan at the present time – but to carry dependence therefore upon your Exertions I may put forth to carry out the instructions herein given

Sandilands

P.S. We shall have some Rainbow but it is expensive to transport

July 16 88

John Tilton Esqr
Deply Minister of Fisheries
Ottawa

Sir

Regarding the proposed transfer a portion of the Salmon Fish Ova from this Provincial Hatchery to the Magog, Bedford and St John Rivers in the Province. I have to report for your information in relation thereto as follows.

500,000 Sal Fontl Egs for Bedford
3,000,000 White fish do do
500000 Sal Fontl do St Johns Rivers
3,000000 White fish do do
1,000,000 Sal Fontl do Magog

These quantities can be readily spared, & as fish of a size proper to turn out could be sent. but at the time of packing the Egs for Shipment, the quantities can be changed to suit circumstances -

With regard to the mode & of transportation which will be about wholly by Railway, it will be unnecessary for them safely there, Experienced, and tried Attendants should accompany

them & see that they are properly cared for en route. In view of this and of Mr A.B. Melnotte's application having practically to come for the Bedford Factory, I would apprehend no danger in their case to Bedford Hatchery safely. But I cannot tell see how that officer could well call for the Eggs arriving by St John River, as these two routes are almost in opposite directions after reaching Moncton, and from the latter place to St John River hatchery would be found the most difficult part to safely carry out the contract. But for Mr Plant to meet the Eggs at Moncton to take them to this hatchery I think would be necessary as he has had no experience whatever in the carriage of Ova by Railway—

I have to propose the following as being the most judicious means to pursue (1) That Mr A.B. Belmont when selecting his quota of Eggs here and having them properly packed himself, shall proceed with them directly to Bedford and take them in his own hatchery apparatus, thus the whole responsibility of the shipment and success of the undertaking will rest upon himself. (2) The Eggs intended for Mr Plant of St John River to be taken care by a special Messenger from this Establishment, who's knowledge of the work of packing Eggs, and carrying them on long railroads, who will

will be entrusted with the carriage of the Eggs and St John River supplies and that the Eggs consigned to Mr Plant at Moncton or Eggs to Mr Mc Mare at one of the Hatcheries and the Messenger to proceed directly on by the American lines of Railway for the St John River hatchery and there place the Eggs in that hatchery giving the necessary instructions to Mr Plant they regarding the after care of the Eggs.

In that way there would be no division of responsibility in the work, as the Messenger being solely in charge of his own lot of Eggs & their destination, from information obtained from Mr Charles Belmont who took the Eggs through to Moncton last year, both Eggs carried by the American lines from St John River, he says that the American route to that city is by far the shortest route and he recommended the Eggs being sent by that route. And in the matter of expense, I am of opinion that it would be less than, than with a Messenger (mentioned) carrying to Moncton for the St John River Eggs

Should the proposition for transfer the Eggs referred to, be acceptable to your Department, I will at once make all the necessary arrangements for carrying the work, as expeditiously as the circumstances will admit of doing so.

With regard to the supply of Eggs of various kinds for the Ottawa Museum due attention will be given to getting them there, so soon as the season of the various Provinces shipments is over.

I am Sir
Your Obdt
Servt
Sandford Fleming
Engr

P.S. Let me know the views of your Department regarding the matter as promptly as possible
S.F.

In re Means for supplying St John River hatchery with parent fish — the following replies are given

(1) The purchase of parent fish at the St John Harbour (if properly cared for afterwards) is the best and surest Means to give success to the St John River hatchery.

(2) To transport Salmon taken at the St John Harbour to the Rapid du Jeune hatchery alive will be found to be a complete impossibility, let them be ever so thickly, or in Quantities of 20 or 25 each that the journey were performed in an hour. Let alone 12 hours. The only possible way to carry adult Salmon alive, and without serious injury to them, is in large floating Cribs, where a constant current of pure cold water fills pass through the vessel. The Crib required to be divided into small compartments about 3 feet square to prevent Salmon from having the freedom of running about & thus preventing them from rushing violently against the Crib-ends, and wounding themselves. — These Cribs require to be almost under water, and are towed along only for short distances —

20 Salmon put in a tank were
the in were half the size of a
platform Car, and without a
constant run of pure fresh water
through it, would all die in the
course of an hour, or less time.—

The Penobscot Salmon hatchery
was attempted to be supplied by
capturing the salmon parr by
pair fishermen, to their fishing
only half a mile distant from
land in Tanks: the undertaking
was abandoned as the loss was
so great.— The eggs taken from
a ripe Salmon may be carried
by rail any distance desired.
The parr Salmon could not be
carried by Railway at all, without
causing death, or such injury as
to cause fungoid disease, resulting
in death.

(3) This remains as answered by
the reply to (2)

(4) Salmon could be readily
caught in the Miramichi Bay
(the tidal part of the river would be better)
sufficient to stock the hatchery.
This method has been recommended
by me to carry out for several
years past: A more extensive
Establishment would be required
in which to keep the parent Salmon
at Miramichi — a large number
of Salmon are netted annually
within a distance of a mile of
the hatchery — some are taken within
a quarter of a mile.

(5) This (2) must be understood
to mean, that Salmon were taken
at Rapid du Femme a proper and
safe position for detaining them
there would be required. The pond
originally built many years ago,
some part of which has become
choked up — to that it is a matter
of consideration whether it would be
a better thing to build a new pond at Rapid du
Femme or at the Harbour — I am
certainly sure at the latter place.

Deputy Minister of Fisheries
Ottawa

Sir

Referring to your Endorsement of 9th inst with copy of letter from Mr A.B. Wilmot relative to Net Stakes on Bedford Basin, I am accounts rendered by Albert Tolson at the Bedford Hatchery for $80.50 which account appearing twice as Extravagant I forwarded his Vouchers I did not pass, but sent it back to Mr A. Wilmot in a letter in which I referred to this account and others as follows –

"I am in receipt of your several "accounts which upon the whole appear "wonderfully extravagant, both as regards "the application of the work, and the Expense "incurred in carrying it out. I need not "here speak lengthily on this subject, as "it has been so often referred to before "but seemingly without due regard being "given to it. Year this year all were "kild than usual. Your bone bill "an very large indeed, the price which you "sanction as "correct," are not equalled "in any other part of the Dominion, and there "appears to be a sort of Lavish Expenditure

Regarding my Tailors accounts; in my case they are given superintendence I think is extravagant when paid by full. Hire of brown (2 or 3 places) are largely charged all about the Bedford hatchery, and I feel confident that if Tolson were told by Mr Wilmot that such high charges for horse hire would not be allowed, a lesser, and a sufficiently remunerative charge would be made. If Tolson would not perform the work at a reasonable price I have no doubt others could be found that would gladly do it.—

I have therefore simply to reiterate my former statement that I think the charges of £3 and £6 per diem for horse hire quite too extravagant under the circumstances.

Dear Sir

I write to apprise you of the wish of the Department that you should meet your Supplies of Salmon Fund, and White fish Eggs at Moncton on the I.C. Railway, at which place you will be seen there per Mr A.B. Silmon of Hon Bedford Halcbury, who takes you here his quota, and there as far as Moncton, where you are to be present to receive yours, and Mr Silmon will proceed on with his to Bedford.

I had wished the same plan to be carried out as last year, but it is altered otherwise. — I give you this timely notice in order that you may have everything in readiness at your hatchery to receive the Eggs with out fy. — I will write you sufficiently in advance of the Eggs leaving here to show you may be at Moncton to take the Eggs from Mr A.B. Silmon, [illegible] train

a nin

for it might prove wholly destructive
if the Eggs were they to be carried upon
the Station without your presence there
to pay special attention to them — Not
only will this special care be required,
but the same attention must be given
from Moncton to your own hatching
Extreme heat and cold must be
avoided, as also rough handling of
the cases — It is proposed to send about
1,000,000 of Seal-Brook and 3,000,000 of
White fish Eggs — You will therefore
set your Incubators for the White fish
Eggs, and keep them ready
for the Eggs —

Regarding Money for
your Expences, write, or telegraph to
obtain & forward what You think
You may want —

It may be better that
fresh nets or perhaps later before
the Eggs leave here — as your boats
all open, & there they may not be
blockaded with Snow —

Yours very truly
Sandford

Alex McDermid Esq
Inspector of Customs
Montreal

Dear Sir

Your favour of 11th Inst. to hand as well as other letters & specimens relative to the spawning of White-fish & your ova. The impregnation of Eggs is often seen carried on in fair condition, but so far as the present appearances have succeeded it would be impossible to form a very correct opinion as to their prospects for transmission by the parent fish.

As mentioned in my previous letter, I fully consider that, your White-fish spawn about the same time as they do on Lake Erie, and Huron, that is in November, and December, & so far as all our Eggs of the White fish for our Hatcheries is the month of November, and after many years of practical application with the matter, we find November is the best month to gather them, as they are then in the deepest state for impregnation. No doubt some Eggs might be obtained in this state even earlier than November

but they would be exceptional; there would also be found a number of Eggs fit for keeping in the Aquarium to decide, but to form a General view of the matter as to when the greatest bulk of the Eggs are shed by the fish, November is certainly the month.— and hence does that the Department has considered that month as the most correct time to adopt as the "Close Season" for Whitefish.— This same month is also undoubtedly the proper one for the Close Season of Salmon Trout.— Whilst I am at all times anxious and willing to receive the views, and opinions of Officers, and fishermen regarding important subject of the correct "Spawning Season" of fishes, yet I have so frequently found them to varied, and so directly opposite to many cases that, I have been compelled to form the conclusions as to correct Spawning times from my own personal observations, coupled with the actual experience of many Officers who annually collect the Eggs for our several hatcheries.— And this point surely be the best test, from the fact that, if we receive the Eggs ripe they will not flow properly from the fish, and if not ripe they will not be impregnated.— So that a knowledge of Experience of this kind is deemed that the conclusions I have come to are based upon no [illegible]

645

[illegible] the fish breeders [illegible] put out of the [illegible] that [illegible] from the Canadian [illegible] sent me from your Division, since [illegible] no other conclusions that I [illegible] the reason [illegible] which [illegible] the [illegible] and [illegible] I [illegible] that [illegible] the fishermen [illegible] he [illegible] that [illegible] the fish, [illegible] that [illegible] acquainted [illegible] least [illegible] before the [illegible] of [illegible] accord [illegible] their own calling.— fish are most easily caught at the spawning time because they congregate together more closely to shed their Eggs, and Milt together with more circumscribed limits, and I suppose it is that the fisherman means [illegible] when they say, "this is the correct time" and it therefore not be the "Close Season." Fish dealers also believe this [illegible] because they can purchase more fish at this time, and [illegible]

the food-fish, and both of the fishermen, also acklessly uphold the Selfish views of the fishermen, and use their influence at the Department to set aside the restrictive period for "Close Seasons", not caring for the bad consequences which would in the End follow, for killing and slaughtering the parent fish at the very time when they require protection for a provident their species — As far as a matter of fact is concerned, there is no doubt whatever that a Whole or any other kind of fish, is constantly Spawning except for some hours killed at the Spawning time, for their flesh, like any of the animal tribe is at that time in a very flabby, unwholesome state; and not a sound healthy article as food — Cows, Sheep and all other animals are prohibited by Law to be put on the markets for food, when in that advanced stage of pregnancy the Same rule should apply to fish, as their flesh is just as unwholesome, as at that time, when they are upon their Spawning Beds, putting on flesh — Trout, during the Spawning season is not procurable for food, two months after the season is over — Salmon are killed here — Some persons are in the habit of using Salmon Trout — but I have given you these few ideas to bring under your notice, the effect which the Spawning of Fish may have upon the supply of Food — I am Sir Your most obedient Servant

[illegible]

Sept 6

Dear Sir

I have received your letter of the 4th inst. and am very sorry to learn that the Spawning season is so near at hand, as I had hoped that the Fishermen would be allowed to remain on the Coast for some time longer, as the Mackerel fishery is now in full operation, and the Fishermen are making very good wages — I shall however, write to the Minister of Marine & Fisheries at Ottawa, by this mail, and will do what I can to have the Close season postponed for a few days — I am Sir Your most obedient Servant

[illegible]

July 27th 58

James Stephenson Esq
Supdt. G.T. Railway
Stamford

Sir

I take the liberty of writing to you on the subject of shipping from that station of the G.T.R. a consignment of Horses purchased this Fall by me for the service of Queen Victoria, now serving with the army in the Crimea, and to solicit your favorable consideration of the same.

As the Horses will shortly be required for Commercial purposes, inhabitants of the Great Lake Region of Western Canada will feel deeply interested in the result of my present mission, and ask from your Company a further reduction of freight

On Wednesday Morning I commenced with Jesus and the work of Reformation. May God make me faithful to my charge as overseer in this Church by allowing the people to go upon the Expectation, receive the baptism, that more Persecution will pay Strict attention to their behaviour & make the Church as the Lord commands till he decides, the Lot per day as before, the Elder as the Deacon, and the Sister as the wife, with the Sister Elder any instructions you may feel inclined to give the Overseer in your absence will be duly attended to & you may be very thankfully acknowledged by

Your Brother in Christ

to those which we have received at
Some hands on former occasions —
Should you permit the Jack Knife
Steam from the mouth to proceed to
Lake Erie, to take on board our Shipment
of Eggs, as in this way we shall not be
subjected to unnecessary delays, which
would otherwise take place, — As this
Steam Vessel or Messenger will have
with him a lot of White fish on taken
on board at Detroit, from our White fish
hatching at Sandwich, and our desire
is that the Messenger will also convey
the parcels of Eggs from their places, and
go on directly with them to Buffalo
Creek; and Return by L.C.R. to Montreal
and St John.

The delay Expected a few
Minutes will take place here, should you
kindly direct him under the Jack Express
of Thursday Morning (having Lamb at your)
to meet him, as he must have the packages

3

at the Station in readiness for immediate
Shipment —

The transhipment of Eggs
in Lower hatches fish Eggs with a long
distance, is a work of very great anxiety
their feeling is somewhat tender and there
a speedy transit for moving with as few
transfers as possible can be effected, —
Great Caution will be taken in the
Removals —

Should 12 or 15000 of these
Ova arrive at Quebec they will be put up
in small boxes convenient for handling,
and will be in charge of a Messenger above
Ready to go to the Steamer upon their arrival
there —

I could through to inform me
of your decision by telegraph, so that
Every one be ready, preparation for the
Shipment —

I have Sir

Capt &c &c

Ship [illegible]

Sir

Referring to the subject of [illegible] to the Lieut Commanding Mate [illegible] for your information & Mate [illegible] Lieutenant from 1st Feb 1857. I am accordingly directed to acquaint you that preparations are being made by the Light House Board for placing upon record the Commission of the U. S. Revenue Cutter Active, and Officers of Revenue Cutter Service generally. Please to direct that a duplicate of your Commission as Mate be forwarded to me at Washington City, as it may be convenient for them to comply with the above request. In returning this Commission I am directed to state that every attention and facility has been given to the shipment of Officers of Revenue Cutter Service.

I have been directed by the Lieut Commanding the Revenue Service to [illegible]

packing boxes for the transfer thereof, there being various other articles required for the purpose of ascertaining the ways which are loaded with the Eggs, and for ensuring larger of security, & ease to keep the Eggs in their original temperature when packing, there cases are made to look tasteefully, & be of use for several years.

I have given pecuniary instructions to the officers in charge at Mayaguez, Ponce, Aguadilla, & Humacao, to be on hand with the arrival of their quotas of the Eggs, with such cautionary remarks for their safety of the Eggs, as should lead to some other satisfactory results.

I shall endeavour the quantities of Eggs to be sent beyond that mentioned in my former letter for the first & subsequent to do, from the facts of our supply, there being almost beyond the necessary supply for successful hatching purposes. The Eggs in their establishment are at present exhibiting satisfactory conditions.

Wm C. Bluenose
Fishery Officer

Sir

With this letter you are placed in charge of a Company of Fish Eggs, Quebec & Nova Scotia for the government Hatcheries at Magog, St John River and Bedford Nova Scotia will be handed over by you to Mr A. H. Moore who has been instructed to meet them at Brockville the Eggs for St John River hatching will be transferred by you to Mr Chas McCarthy who has been instructed to meet them at Moncton — the eggs for Bedford quarters will be taken charge of by you to Bedford

in as cool a location as possible without suffering them to freeze

The shipment consists of White fish, and Salmon-Trout Eggs which have left here in the best condition and healthy. Your previous knowledge in the management of hatching out the Eggs, must be your guide, but should you desire any information, or want any thing specially pointed out to you in securing a successful result with the Eggs, please communicate with me on the subject

Yours very truly
Superintendent
Dept F. & C.

P.S. Report to me the details of the Eggs when placed in your Custody

Dear Sir

Mr. Alexander Stewart
Confederation Life

I am in receipt of your favour of the 18th inst. enclosing a copy of your application for a position in the Provincial Secretary's Office, and I have pleasure in forwarding it to the Minister of Immigration for Ontario, for whose use it is intended.

You will see what I have to say regarding the duties you have performed under me, and I hope you will find it satisfactory. In reply to your personal enquiry, I may say that I am willing to give you a testimonial as to character and ability as an officer in case you require it.

I am Dear Sir
Yours truly
Lieut. Colonel
Dep. Ass. Gen.

I must draw your special personal attention, and care to them Esp. during their carriage on the Cars. Extreme caution is required on your part that the Boxes are not placed where extreme heat or cold will effect the Eggs, either of these extremes will produce fatal results. It frequently very frequently takes place, especially when exposed under the present system of the Management of the Baggageman on the trains, over heating and or freezing by handling the cases in the performance of their work in taking in and putting off ordinary baggage. Extreme

Your duty in connection with this large consignment of Eggs is an important one requiring more than ordinary care and personal attention, and the Department at Ottawa as well as myself look particularly before to her Majesty to carefully may happen to interfere with a successful result of the Shipment

I am Dear Sir
Lieut. Colonel
Dep. Ass. Gen.

of the most important Services, hereby
Establishment confided to my superintendency
in the Dominions. The magnitude of the
Work connected with it, necessarily
Entails upon the person in charge of its
Engineering, and Ordnance duties, require
Skill and application for the work, coupled with
Extreme correctness, and the exercise of
Good Judgment. These requisites you
have applied unceasingly, and have the
ultimate satisfaction in the general performance
of your duties.

With this knowledge of your
Services, and knowing full well how
Necessary it is on the part of the Government
to retain, and reward an efficient Officer,
I can cheerfully offer whatever assistance
that I may be in my power in recommending
the Measure to grant your request for
an increase of Salary believing as I do
that

Sir

Referring to your letter in re habits of Black Bass:- I beg to state briefly that they are of the family Percidae, and are indigenous to most of the lakes and rivers of Eastern Canada; they are hardy withstanding high, and low temperatures of water.- Those inhabiting the colder waters, such as the Rivers St Lawrence, and Lakes Ontario, & Erie are better for Edible purposes than those found in the smaller, and comparatively warmer waters of smaller Streams, and inland lakes.

They are highly prized as a game fish, and for the table; the Fry of the American Angler for the Black Bass, even exceeds that for the beautiful Speckled Trout.- however their habits differ from them.- There are many waters that are well adapted for Bass, which would be wholly unsuitable for Trout, as the latter require fresher, more highly aerated, and colder waters than the former.- Upon the whole Lake Erie, where there are extensive beds of rushes, and other favorable spots like these, are largely inhabited by Specimens fish like these

Sir

I was favoured yesterday the
Resolutions of Mr. Lewis touching those
Officers who may be put in Nomination
Members and others but Otherwise Speaking
You a List of Officers as to Stand the Poll in —
In the absence of any further Instructions the
Poll may be Furnished in the Same Form as
as last year. I do not however hold to the
Plural form but Name a Single Person
for each Office of the Corporation, as it will be
found that a greater number of Persons
Names will be found to Have Polled on those
Offices Since —

Regarding Dog-Hire, if it
is found necessary to put such Some of the
Dogs to Hire many will not Purchase but Hire
Cheerfully apply to Dog for Lake Erie & Huron.

Regarding a Place in the Railway Schools
Which Hint can be attained, as the Connection
Set in here — the Messenger accompanying
the Dog has to pay ordinary Fare — but he
have for the Privilege of Carrying the Dog
in the Baggage Cars Express Trains, with the
understanding that the Passenger pass before

Sirs, I am much obliged by your
Letter of the 26th Inst. Enclosing
Resolutions of the Board of Directors
of the Sandusky Mansfield & Newark
Railroad Co. Also a Resolution of the
Stockholders of the Same Company
Passed at their Annual Meeting held
in Sandusky on the 27th Inst. — I have
the Pleasure to inform you that I
have Purchased the Whole of the
Stock of the Said Company, and
that I am now the Sole Proprietor
of the Road. I am Sirs Your Most
Obedient Servant

by the Paymaster in charge — I will see whether a Summons Warrant can be got from the Grand Trunk Authorities for their lien upon which you may have a Verdict for.

Regarding the discharge of your remaining hens with the Eggs as spoken to in your letter. I can only say that I see no objection, as your passage and Rations were allowed last summer on a Steerage, for which I recommend some little questioning — In the present case it was considered best in the interests of the Department and in the safe transmission of the Eggs to get through to Montreal, that the work should have been performed as it was.

With reference to fitting up a dwelling for you, I have only to report that I have sent many times to have it done, and have to report to the Department, that until the descriptions for the Department have been passed by the Parliament, I cannot say what may be done as it is a matter of necessity & expenditure and I am wholly under Departmental orders in that respect — I have again stated in my annual Report that, the whole of the Lower flat of the building is absolutely required for Storage purposes, in which case some provision will be made for your convenience for your family —

I am Yours &c
Lieut
Lt Col

Montreal 88

John Tilton Esqr

Dear Sir

In a Conversation with my Son today he informed me that you proposed to the Success Members of the Community of planting Sea Trout fry in Chatsbit Lake & near Your Town — Could you without inconvenience Yourself, find me some

reliable data with regard to any returns from the fry put into the lake or any other lake coming within your sphere of knowledge — If you could do so I would Materially assist me in the building in which I have laboured hard to promote — There are many sceptics, and it is daily prejudices that hath the above response from you —

Your name is of Any Standing in my Neighbourhood will acquaint with

other requisites as readily like those you got from here as possible — We find that a similarity in all our appliances at Loch Katrine would be desirable, for the more easy understanding of what may be going on

We are having a very cold time here just now Equal to any Arctic Winter —

Yours
Very truly
Lewis Nichols

to get the necessary Stationery and also for a Neh made expressly for the purpose and Employ our own men to fish it during the Season.— If this is assented, thereby another Boat additional will be wanted for the fishermen to attend there, and we would beg you to send all the fish suitable for our purposes.—

The Department is anxious to be on terms with any possible means that persons are habitually putting fish nets, the Hatcheries are debarring them to the River by capturing the Salmon on their Spawning Ground instead of the Egg the object of getting Parent fish early in the season at some other place than the Establishments Nets, ask why the same plan should not be carried out at the Miramichi Nursery?

Now let me hear from you as quickly as possible about this, and if we cant do any better, let us Economise with our nets ourselves, and see how we will turn out for the coming Year

I am Yours
Lieutenant
Supt.

March 86

Wm Isaac Shearpeen
L.O. South Esk

Sir

Referring your previous communications regarding the mode of preventing Poach Salmon for your Hatchery, I have now to enquire more particularly about the means that might be instituted to carry out the work. The Principle is desirous that, some, if not all of the parent fish should be taken from the early runs of Salmon which enter the River, and it would appear that the Department has been applied to to have this done by some of the fishermen, and dealers, and from others who allege that the early run fish will produce better results to the river by breeding from them, rather than the very late runs.

Now I wish you to make a thorough inspection of the river within a reasonable distance of your hatchery, to see if you can select some small inlet or Cove, that could be readily inclosed, and where a sufficient depth of water could be had at low tide, that would insure health and safety to the fish[illegible]

Yrs

Might be permitted upon discovery the time which they would be liable for offending
If you can find such a place then
let them know all particulars above —
In the next place would not the
present pound at the hatchery answer if
properly be joined at the present outlet of
it — by the joining it with a certain depth
of water would always be kept up — the
Expence the latter for the benefit of the Salmon
during the Summer — In this case could
you not make arrangement with some of
the Loch fishermen near by, to sell you
their fish alive and you convey them
in Carts at fixed times after the
hatchery — If the present pound would
in your judgment be suitable for safely keeping
the Salmon in, until you could make some
satisfactory bargain with Strangers more
of your resident fishermen & Proprietors
would be prevailed upon to join you in such purpose without
call for Remarks that occurs not fill
the fish Ponds done at the Confluences,
at Leith, and at Inverness, and enemies
only will include — Should the present
pond would do, could you not take a
net of your own numbers fish outside the
one, and make a trial number by pla
some fish? If you think this could be
done we would observe with much pleasure

Leith 18

R. L. Callender
Esq. Lochmore

Sir

I have received & perused
drawings done by Mr Smith Butterfield — By
this I presume you mean the trial pond
for retaining Salmon — If you
could give me a rough sketch where the
drawings is to be kept I may form some
better idea of the distance & I presume
it necessary to have the drawings & plans
but should prefer knowing just where
the drawings is, whether at the same body
of the stone or at the factor — I shall be
glad to speak to the Boy as being very satis-
factory — Any general directions to the
factor — I may perhaps call upon you
to look a drawing out with you
to the south —

Yours
Very Truly

1 28 88

Mr Henry Clark
Lighthouse Keeper
Freedtown P.E.I.

Sir

I received your telegram regarding breakage in dozen and leaving supply of water on Egg - I would like to do, and also ordered Mr A Bellamy to go and assist you saving the Eggs, and to convey them to the Bedford and Miramichi Lightvessel Bellamy writes me today that "the Eggs were not packed in boxes with straw about them as ordered by me, but that the Eggs cannot be taken off the Island in ice but the Eggs but must wait the Northern Light Steamer down to Pictou which will probably be in three days, and that the Eggs were placed three layers deep in the troughs, and that two men besides yourself could pump a sufficient supply of water over them."

I saw you today at Freetown that or Bellamy was not sufficient water could be kept on the Eggs by pumping, that you were to see to it, and employ additional men if necessary to keep a full supply of water on the Eggs night and day; and to prevent premature hatching of the Eggs - You are

[illegible] by supplying ice or snow to it, and upon [illegible] write or telegraph me what was done, and that you were successful.

Now as the place of procuring ice in the Turnpike has been agreed upon by yourself and Mr Hunt, you must see that it properly done, and that you shall not be able to say that the Eggs have been lost by the want of pure supply of water - because you are instructed to get what ice may be required to give such supply by procuring it [illegible]

My orders for packing the Eggs in the boxes with Straw or ice about them would in my judgment have been best, as the Egg packed properly in this way can be safely kept for weeks - months and but very trifling loss. - As you have taken the other course of keeping water on them you will have to take the responsibility of any if not thoroughly, and well done.

If Mr Hunt did not instruct you how to pack the Eggs, when they are ready to go with the Northern Light across [illegible] let me know, or you may refer to the instructions given in my telegram to you of 22nd inst. and which have been repeated [illegible] this morning. Should you have [illegible] may take place [illegible] transfer [illegible]

by first trip of the Northern Light. The principal thing to fear is that as the supply of water may not be large enough, and cold enough, the Eggs may hatch out prematurely and die - this you must prevent by keeping the water at as low a temperature as you possibly can, by snow and ice - and for this purpose you had better collect a tub of snow and ice at once, and place it where it will keep as cool as possible until the time arrives for packing the Eggs.

Write me immediately upon receipt of this, what each state of things, but what the means that may be required to save the Eggs. If you had placed a strong boom across the entrance to the pier to keep the ice from the reception house I cannot see how this breakage would have occurred - a boom would have turned the ice over its edge, and thus prevented the pier [illegible]

I cannot stop over to see you and see the premises and let me know how affairs are - I have not heard from you - Must you will save the Eggs, what you can do, if you keep a full supply of water in until they can

Sept 4th 65

Arthur Lillico Esq
Deputy Minister of Indians
Ottawa

Sir

As the time is rapidly approaching for distributing the Presents from My Government which you are yearly in the habit of receiving for the Indians of your Department, I have to request that you will be pleased to forward me the usual applications which have been made for them—

I have in receipt five Hundred Applications which have been forwarded from your Department, some of them marginal instructions upon them, which have been complied with, by forwarding the necessary information to the applicants, there are other applications without instructions being appended—there are also a large number of applications which are forwarded to you in my letter of 29th February last to which I have as yet not received reply.— I also wrote to you upon Sept 20th March last in relation to the 28th March last in relation to Blue Mountain Reserve, in which I suggested that it would be a good thing if details connected with it were forwarded, which might prove troublesome hereafter, which might prove troublesome hereafter, by your Department—If the funeral outfit for

" Depending these applications does not rest
" Devonald undertaken to work and he retain
" here in as satisfactory a manner as possible"

Mr Christie Bennett informed me
that a copy list of applicants were on file
in Yarmouth — Should it be the desire to
comply with any or all of these applications
I should feel obliged if you would have
them sent here, as that the Council make
their arrangements accordingly —

A great difficulty I foresee
exists as to the employment of parties procuring
the Piles of the Jetty and the expense attending
their carriage &c — An estimation of the
detailed plans has been prepared by Messrs
Depth — I would suggest the following viz
(1) That the names of all applicants be sent
here above, the Engineer there that Messrs
Depth desire to furnish with pay.
(2) That upon this being done, Council assign
each applicant of the No of pay they would
perform and that they should immediately
and also state whether they would take
ordered for them: or if they preferred
the pay sent to them, the expense of the
Messrs upon taking them would be required
to be paid by the applicants in advance.
(or upon delivery)

Should this method, or
any other be adopted, it will be necessary

that immediate action should be taken
as it will be impossible to keep the
pay on hand beyond a limited time
without liability of loss.

Regarding the distribution of the
Whitefriars pay at Lowestoft, Bradford
and St Nicholas vide instructions, as previously
mentioned in my letter of March 22nd last
I have to suggest that they be planted
in the same localities where they were
put last season. — Should any of the
latter have been selected, which Your
Depth may desire to place some of the pay.

I should feel obliged for an early
consideration by Your Depth of the disposal
of the pay for the ensuing year, and Whitefriars

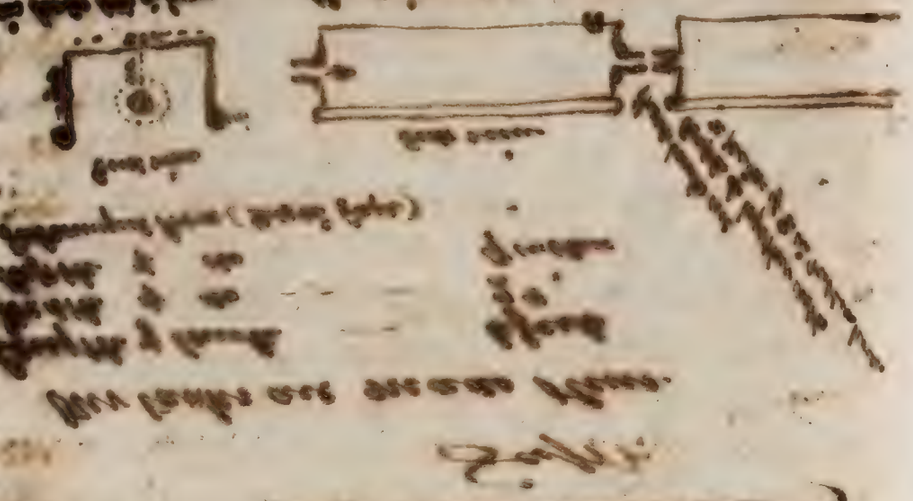
I am Sir
Your Obedt
Lieutenant
Depth

See the matter in a rational way you will conclude as I do - You Hatchery should be large enough to contain all the Number of Eggs you have under hatching and other circumstances would be agreeable

There are in the hatchery here, the exact spot which is nothing like as large as yours and at least at the present time from 200,000 to 400,000 of Eggs in first class condition, the Eggs have already taken water and are much more delicate to handle than Salmon Roe, - we are obliged to put out the fry as soon as hatched and would rather feed with pure water - The tanks are made of split inch Deals of from 6 feet long 2 feet 3 feet wide and about 8 inches deep, in these about 3 more fry are placed with water running constantly through them they are put out in the open bin where the young fish do very much better than with the boxes. In this way we keep our fry in Hatchery and until they shall make the Net there will carried away - We have done as to 40 of these tanks but placed along outside must feed from the troughs with pure running water - I think you have better make arrangements to have a lot of these, so that you can thin out your fry as they hatch - keeping them inside the hatchery under them tanks and delivers - they want all more air light to help them forth - these tanks are 10 here 25 each and they will hold not 400 but you more or even as much by putting a number of them above, by one of them above, by one of them above, by three of them above, and you will find them much convenient for keeping fry in, and for delivering your troughs from over crowding

Where did you get your wire screening for your reservoir? and what sort that fish pass from out pipe, which width are the slats apart? and are there five lines of wire on the slats? Look for information as we contemplate making a few at the Restigouche hatchery to keep Salmon in, and may want your services to show them how to make it - The Miramichi Salmon being smaller than the Restigouche, would require the slats closer together - Can it be got as regards of cost in your province.

Let me hear from you about this at once also let me know the cost of a good reservoir for keeping fry in, and fitting complete, size, wire and where it could be got



Sept 18 88

Mr Secretary Chapman
L.D. Hall Esq.

Sir

Referring to your letter of the 1st Inst. & former of the 30th March respecting the Completing and Maintaining of the Fences for the use of the Marquis de Barbé Marbois, I have to remark upon the Orders &c. as follows—

I am readily for the dispatch in the Execution of any Public Service at present from the Secretary of War's Office—Should they still be of opinion, about a mile below Yorktown as heretofore mentioned, but after seeing your letter I fully agree with you that for many reasons it will be proper at the Bridge to have the most Southern part of it can be secured with a sufficiently strong fence, to prevent the escape of the Cattle, and keeping from hides—they should be in the place by every mile, but I shall do as soon as aided by a sketch which I made of the place in 1777, and shall publish it in my report of that year.—I send you herewith one of the sketches which will

It is also an ordinary Custom to pass Several Letters for the Respect of Some Notoriety, at the Residence of Sir Peter, after he should have & Made a few Years Rest—I should therefore like to Get the Information asked for as Speedily as Possible.

Dear Sir, Yesterday I
made application for Stock Yards
I desire to say to you that
the pay will be ready when
we close about any time after
next week or perhaps sooner.
If required - Please let me
know whether I must
make some further payment or
whether the whole sum

Ottawa April 18th 1888

Dear Sir,

I have received a Circular
letter from Messrs Pellatt & Osler
stating that the Toronto Stock
Yards Co. have given notice
of their intention to apply
to Parliament for powers
to construct a railway
or railways for the purpose
of connecting their Stock
Yards with the Railways
running into Toronto.

Yours very truly

Sept 15th 58

Mr Hutchinson
Deputy Marshal of Utah
Territory

Sir.

Yours of 12th Inst asking whether Musk Jerk and Salmon Berry could be planted in these premises in the Township of Stony upon the application of Senator Rollins.

In reply Sir I have to state Musk Jerk can be had at the Mayor Valley, but Lieutenant Sergeant tells Senator Rollins should give the name of the Lake, and the mode of their approach, so that I can give the agent to order for their transportation

John Filton Esq
Deputy Minister of Fisheries
Ottawa

Sir

I beg to Enclose herewith a Petition praying for permission to Erect a Fish Breeding Establishment on Charleston Lake, at the Mouth of Young Creek, and to be supplied with the Spawn of Salmon from the Plantations of Young Trout in the Charleston Lake Waters. I beg also to Petition that further supplies of Salmon may be planted in their Lake in the Autumn, and also ask for Young Black Bass for the same locality.

I send your Department the Petition, as well as Mr Archibald's Letter accompanying it, in order that the Government may form an estimate of the Expenditure which will be required from the Dominion Funds for the purposes mentioned.

Mr Archibald mentions in his Letter that a copy of the Petition is to be sent to Mr Lord M.P. who represents that County in Parliament. I have however considered it advisable to send the Enclosed which is

for the Dominion

April 14 88

Dear Mr Chesfield.

I beg to acknowledge the
Receipt of your letter with the accompany
Petition of Inhabitants in relation to the
benefits derivable from the planting of
young Salmon in the Okanagan Lake
waters -

I have forwarded the Petition to the
Dept at Ottawa, where I trust it will
receive that attention which it is entitled,
I will however endeavour by the further
supplies of young fish to those waters,
as he shall have a very large one to for
as the Okanagan River Country & spring, and I
may also say that I have in contemplation
the breeding of Black Bass, which I shall
forthwith procure many obtain some of them also
for they are very

I shall & support that your efforts
for obtaining the supplies you desired be made
directly through your Hon. as perhaps there
be just than might otherwise be the case.
however you may rely upon my best efforts
to assist you - Thanking you for
the trouble you have taken in this matter

I am Yours very truly

E. D. Porter Esq
Asst Commissioner
Patents

Sir

I am in receipt of your letter regarding the Automatic Fish Hatching Jars invented by me originally, and afterwards stamped Invented by a Mr Chase who claimes a Royalty for his alleged original Jar Pat. Dated some years ago unto me in this respect, and I answered him in detail, upon which he impressed me that as mine was the original invention patented in the United States, and Canada, that he did not see why he should pay a Royalty to the Owner for, which was simply mine by his Claims for, which was simply mine in every respect except some trifling alterations in shape, but that the Jar claimed by Chase was identically the principle Embodied in my original invention.

That never claimed any Royalty, nor have I ever asked Mr Smith, Jones any one for my invention — Have taken a very deep interest in every

offspring. by the science of Artificial
Fish Culture, and having by the
application of the knowledge in this Con-
tinent, I applied myself to investigating
all separation, that were of attention, and
Scrupulously the want of hatching fish of
more especially the more important species
or smaller kinds such as White fish
Pickerel or Trout Lake Trout &c
having erected the first perfect & Whole fish
hatching in America, commenced my
experiments with different kinds of Trout
upon which I was enabled to attempt
and successfully accomplish; after
several trials of different kinds I at last
succeeded the far earliest by artificial & the 1st
in Canada Pickerel to Artificial, all kinds
are spawned or deposited from & under
the Natural Instinct or other circumstances
of Confinement first operated with a set of hen
Trout, these with Bass, and Gaspereaux,
and finally Shad the most Important
all from Natural in Canada, Lake Erie &
slight improvements have been made in
the shape of the Automatic Incubation the
first invented by me originally in 1868.
I have among the two, have also
Sandwich, Lake among Shad &c

at the Establishment here, which was
the present Institution, where all of my
original inventions and hatching appa-
ratus first got up, went on & perfected
& successful, & on them application to all
the other Canadian institutions
under my charge & control. He first
hatching Pickerel from the Eggs and
above first artificial operation of Incubation
by means of box or trays, ever happily
imagined. — first at Newcastle, &
a year or two after Salmon fish
by Mr Ramsay, which I started & hatched
Spawned to fish, but little have Shad, Lake
Trout are first here. — My object was
taken out once before by the artificial
hatching in the world, and by extensively
and Economic fish hatching, I have
known myself to Individually — to
after the Government the Patent for same in
and the United States, it was obtained
& Effect after the usual time of 18 years

Leaving that period, and up to the
present time I have had three Automatic
Fish Eggs hatched & operations in all of
the Establishments, some [illegible]

I write to inform you that, our Corps of Pioneers have pay'd a considerable large Arrears, and that they are at the present time, in the most destitute Condition, and will require all the Cloths we can get forth to distribute to them before the Winter set in, and prevent their future Labour, I conceive it necessary for this Service immediately —

In this view of the case I beg to obtain all Applications that may have been made to you, to that, with those which I have already got, we shall make one distribution as speedily as possible, the Applications we have at present are confined exclusively speaking only to drop in the Pockets of the Pioneers Members of pay in our Corps

It is our present intention to Landing large numbers of the Young Trees along the Shore of Lake Ontario, at the most accessible points from Hamilton

May 9th 88

John Sutherland Esquire
Deputy Minister of Marine
Ottawa

Sir

Referring to mine of date in which you contemplate planting Salmon Trout fry in New Brunswick, I have delayed answering your note until the present as I have just received a map of the Provinces of N.B. and N.S. from A. Gilmour Esq.P. who visited me last week, and promised to send me maps of these Provinces — Having looked over the Map of N.B. I do not see upon it, lakes that would be suitable for Salmon Trout fry other than those mentioned in your letter, and of those I would give preference to Magaguadavic, and Oromucto lakes, on account of their apparent larger size than the others — But I should say that little greater preference should be given to Grand Lake, which is by far the largest body of water in that Province.

Magaguadavic and Oromucto lakes are in York County, and would therefore [illegible] the application [illegible]

to Kingston, but which being this, we shall give orders to have arrangements for supplies for the lakes in the interior of the Provinces. Should you require any other distribution of Salmon Trout fry than that alluded to in this letter, be kind enough to let me know at once. Otherwise the plan proposed will be pursued as far as circumstances will permit such a very great number of fry on hand to be the object and most convenient course to adopt.

I am Sir

Yours obedt

Sandford Fleming

Supt &c

Grand Lake

[illegible] to Kennebecasis, Whether there were
be desirable Lands not sufficiently well
acquainted with them to decide, — Salmon
first require deep cold pure fresh water
to thrive in. — In St John County, Loch-
lomond appears to me safe, — In Carleton
County I notice Grand and Baker, Nancy
not given but McClusky in his list calls them
Baker, Boundary and Lakeville Lakes. In Victoria
County the Map shows no lakes it seems
however that McClusky in 1887 planted fry
in Waters called Meadow, Portage, Webster, and
Trout, — These Specimens were mere parcels
and it is doubtful indeed whether Salmon
Trout or White fish should be put in such
insignificant waters.

Another consideration of
much importance is the facility of stocking
these waters safely with young fish,
and in this view the waters Magaguadavic,
and Nerepis Lakes in York County, are alike
easily approached by Railway from Hospital des
Femmes. Grand Lake in Queens could be
reached by Railway to Hoyt Station, and thence
by Steamer up the Grand Lake waters. Loch-
lomond by Railway to Rothesay and thence
by wagon but it would be a long and some-

somewhat elaborate route to many
fry.

In conclusion then I would say
that the Magaguadavic, Nerepis, and
Grand Lakes present the most complete
points for Salmon and White fish
Hatching, on account of their magnitude
and there ready means of sending them
both Upward to the other Lakes above
as Young Salmon (the most tender) cannot
pass a fall or rapid of moderate descent they
will be arrested somewhere from their descent
before the Smolt stage, they are very small
waters, and therefore not to all intents fit
for Salmon Trout and White fish as they
should be —

In Nfld Trout and Salmon
Eggs to the number of 800 thousand
for stocking that White fish were planted
in Grand Lake some years ago, and were
caught a few Miles in the North of Bay
of Long and Deer Island"

The Boundary will no doubt
have to the Waters of the Kennebecasis
Waters, and if found suitable Salmon
Trout fry might be taken there by rail

John Tilton Esquire
Deputy Minister of Fisheries
Ottawa

Sir

Referring to your letter of the 6th inst asking for further information respecting an alleged overcharge of $2.00 per ton for the use of Mill's fish conveyed by him on Bois Blanc Island, from which Mr. Parker & the Dalers for the Dominion Government

From information obtained from Mr Parker the Officer in charge of that Station it appears the following reasons are given why the sum of $4.00 per ton instead of $2.00 per ton should be paid for all Herring received by him in connection with the collecting of Mill's fish at Bois Blanc Island during the fall of 1876

(1) The arrangement was made to handle Mill's fish on Bois Blanc Island, because the Fisheries Department were considering the advisability of having that fishery carried on entirely the property of the Government

(2) Mr Parker says he estimated the

value of the privilege of handling the fish for the ensuing season and that vessels engaged in the Labrador trade with $100. Each were licensed accordingly. The Seamen fishing, which arrangement was considered quite sufficient, and not objected to, but having attached to vessels the fish from the one side of the Labrador to the other on account of very low water there was considered that, were the fish deprived of the value of the fish might have been caused, and therefore the additional sum of $50 was accordingly making in all $150. The hire of $250 was accordingly prevented by the Revenue [illegible] from circulation; the Rule prescribed by Notice for $250 is therefore inoperative, as well as unjustly oppressive, and should not be paid as such.

Sir

I have to apply to you to
request information for the
Whitefish Lake Reserve, and
I shall be obliged if you will
write me at 12 Ind. at the latest
I am also requesting the Indian
Agent — to furnish me information
that — I believe from Mr. Allen of the
Interior that the Whitefish Lake Indians have been
distributed & the following numbers
Grand Lake Manitou Island 100.00
Williams do do 750.00
Sandy do do 150.00
Georgian do Island 2.000.00

The Whitefish Lake Band
appeal distribution at once, as the
Lake was unusually low in having
dried from ice holes had blocked
through in which to plant the seed
the success in hatching the White fish
Egg was very good indeed, the low

Dear Mr Hoskins

I have just received with
Peabpleasure your esteem of 15th inst
that Peat Tarpon 154lbs.- Did you fish
him landed with rope & pulley, or did you
fire a Steam key blow him in? What a
Brute of a fish he must have been.- I have taken
a Sturgeon of 90lb But I would as leave haul
in a good sized Cane log- My Cane log
I presume would be more valuable for lumber
than your Tarpon would be for food, as I am
informed that they are not Eatable Except
by the Negroes.- Bah!! dont talk about
Tarpon, Sturgeon or any other fish, when

Hanover [illegible]

Labrador Sept 26th 1788 6 o'clock Evening

Morning Yesterday Evening I received your favour of the 24th Instant, Acquainting me that I was to receive by every Opportunity that offered from the Fishing Season, the Balance of Your Account for Supplies last Year delivered and I do assure you I am very much disappointed that I have not received it before now, as I have had several Opportunities of Vessels that were all in Your Debt, & Bound to Newfoundland & Labrador, & I have frequently applied for Several of the Masters of Vessels to Call on me for the Money, but they all Answered me that they had no Orders from You to Call on me, & that they Could not Call on me for the Money, but I am Sorry to find that you have been Misinformed in that Matter, for I have Constantly Sent Your Bills to Newfoundland, & Labrador, & Received the Money for them, & Remitted it to You, & I Can Assure you that I have Remitted to You Every Shilling that I have Received for Your Bills

June 5th 88

J. Webber. Esq.
Fishery Overseer
Orillia.

Dear Sir.

The time to make application for Speckled trout is in the beginning of the New Year. say January or February. The supply we had have all been distributed and it is now quite impossible for you to get any till next season. If you want any then I would advise you to apply as early as the demand is very great for boating. Yours respectfully

Wilmot

June 5th

Dear Mr Moore

Jake has left for the Rat Portage and will be absent for three or four weeks. Should there be enough snow from home for a walk. In regard to the Eggs to send to Boldens Orchard where fish have been applied for. Use your own judgment in the matter as regards getting them here.

Yours truly

Wilmot

[illegible] the settlers in
the neighborhood also state that
they have caught them. Mr
Arnal told Allen from
whom he learned that
dear Mr Fotter who make that
they have caught the Salmon
Trout. You will see by the
Enclosed letter from a Settler,
how the Indians of the
Rivers Ottawa this season.
My hopes are very successful.
Hardly a day like fish having
been taken in the very upper
and long [illegible] may be read.
[illegible] respectfully
J Fotter Esq
for Postmaster [illegible]

June 5th 88

J Fotter Esq
Ottawa

Dear Sir

I hope the box containing
some specimens of Salmon Trout
caught in the waters of the North
Riding of Hastings reached you
safely. I fear however, they would
not be in very good condition as
they were several days on the
road before I could get one.
They are undoubtedly the fry
of planted in these Lakes
3 [illegible] ago, as there were no
[illegible] Lakes previous to

June 5th 88

Jn. Fotter Esq
Campbellford.

Dear Sir.

Your application for fish
is too late for this season.
They have all been disposed
of for which an application
through the Dept of Marine
at Ottawa as long ago as Feb
last. You will no doubt get a
supply of Salmon Trout on this fish
[illegible] by Dominion [illegible]

June 5th 88

Dear Mr Fotter.

I am sorry you have
sent your application so late
in the day. We did have a large
quantity, but they have all been
distributed some time. I should be
only too glad to meet your wishes
but unfortunately you are too late
for this season. Let me advise
you to apply early next year.
Say Feby. We think we made

Memorandum.

Sir.

Accounts from [illegible]

John Filion
Esq

I respectfully must state that I did not receive instructions in time to distribute the fine lot of trout that were hatched. They absorb their sac in three days after hatching and as they live upon animalcule food it is quite impossible to keep them confined in tanks more than a few days.

I noticed yesterday (Sunday) that the ones I had taken out of the ponds where they had been hatched, showed signs of weakness for want of food. And rather than lose them, I ordered Menefiote to let them out into the stream.

We have still a large quantity in the ponds where the spawn were spawned, but as they are now very lively it is impossible to capture them in quantities sufficient for distribution.

I regret exceedingly that you should have been absent

fews of the time there fail appears to be detected. For not as from the time of my letter of the 21st inst, and by the Telegraph of the 22nd inst that it was impossible that they should be liberated speedily. It is impossible to keep them Confined in a small Compass of water more than three or four days after shooting their own, as they are very small when first the most minute [illegible] Commence.

If there is any special order that you would like followed, I might collect several thousand of the young bees in the Jungle in the course of a month, by means of a small [illegible] net. This would take considerable time and trouble, but I think it would be done after they have commenced swarming.

I am Sir
Your obt servt.
Helmet

I enclose you a letter sent you on the 19th inst, which Mr. Barnet returned to me the following day with the Memo. attached. — I write Col. Olpherts on receipt of this letter that he must apply to Govt. through the Resident and I should be happy to fall the trees. &c

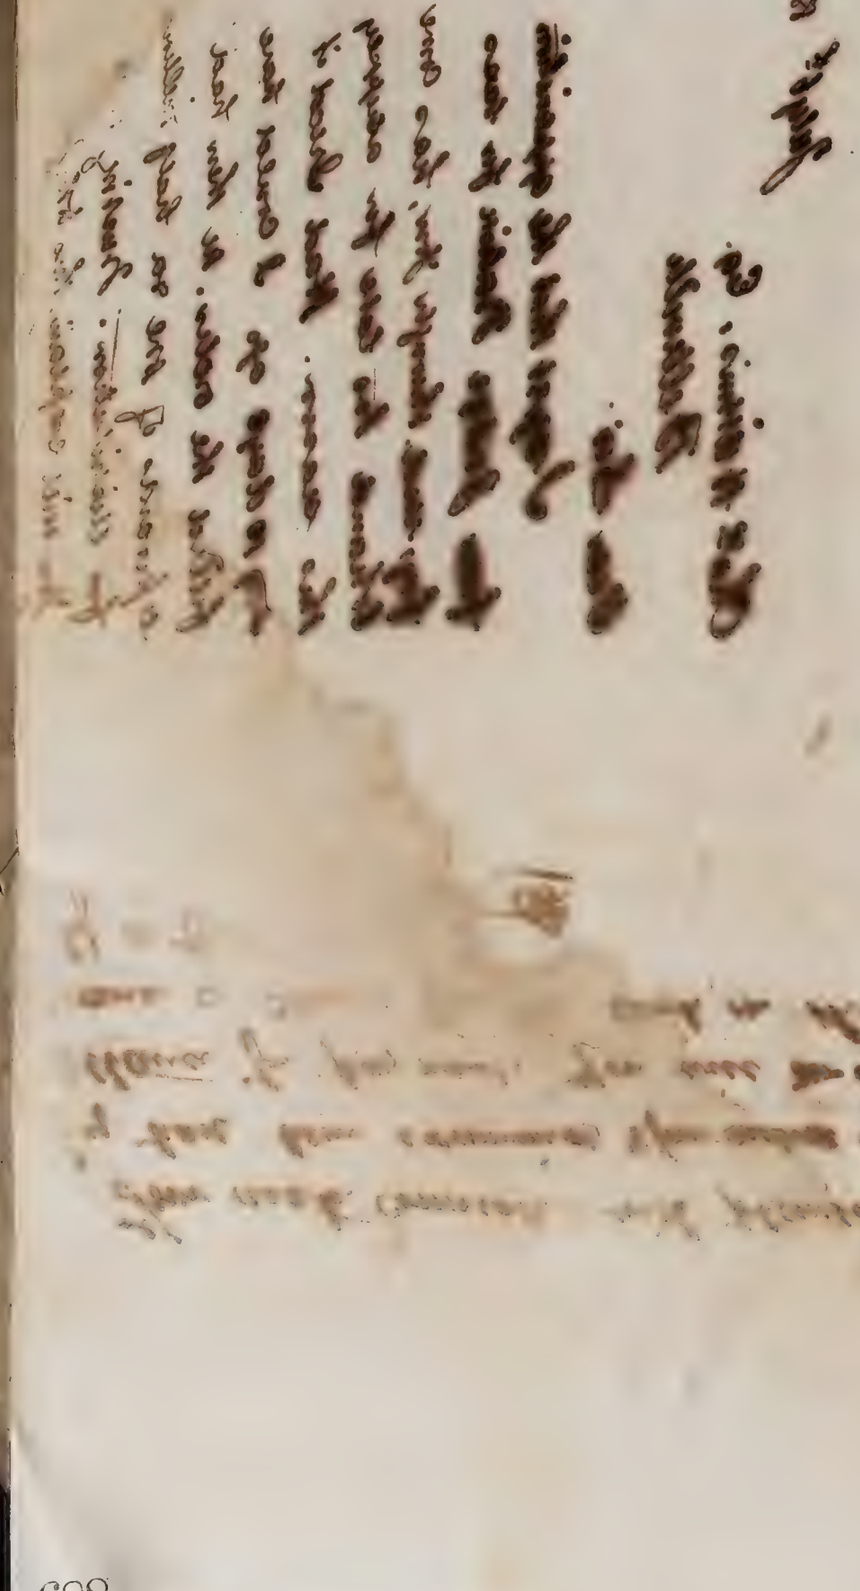
			$251.55

I am Sir
Your obt. Servt.
[illegible]
Surveyor &c



July 6th 58

Philip Tibbet. Esq.
Yonge.

Dear Sir.

You account for
Subscription if they have been
received and forwarded &
Cheque for payment of Notes.
Will you kindly send at your
earliest Convenience a Subscription
Paper the place where you
have Collected Money "in".

July 6th 58

Thos. H. Ellis. Esq.
Belleville

Dear Sir.

I regret that the application
from Judge Hagerman for two
Boys, sent through you, has come
to hand too late for acceptance
this season. Had I had it
only 10 days ago I could have
filled the order. As I then had
a Number of more than half million
for distribution. Trusting
you will explain this to

Yours truly

July 6th 88

I herewith return the Trial and ask to sow for further consideration. Since we have nothing & the Ld to simply put one signature to an order to recd the money for payment, no matter what Grade they are in. You are very sure to succeed. In instance do you think that it is at all likely that the Supt of Navy will be asked to pay out & Com Decatur Stoney without the slightest idea what it is for? Why should Ford pay out this money & why is the Acct. not made out in Lieut Jones name or the Halchiras? I certainly will not take the responsibility of passing such an account & I am sure no one else will at your request.

Yours truly

July 6th 88

Sir

I have the honor to enclose herewith Lieut Jones's account for Provisions and Refreshments on board the Halchiras from the 1st to the 5th inst. which you will please forward to the Navy Department for payment.

Very respectfully

Your obt Servt

Lieut Jones

Halchiras

10 July 76

John Tilton, Esq.
Deputy Minister of Fisheries
Ottawa

Sir.

I herewith forward for payment the following accounts connected with the Fraser River Salmon Hatchery.

Max Moore Victoria	$16.00
Wm. Munro Ditto. 7th June 1876	17.50
	$33.50

These accounts have not been receipted or certified to, however I forward them to you and have written the Officer to see that this is strictly adhered to in the future

I am. Sir
Your obdt. servant
A Wilmot
Asst Supt. F.C.

Mr Albert Blenus acct. for horse hire I cannot, nor will not certify to having used a horse & waggon unless there is no reduction made in it, for I must just treat it like a stone for I cannot certify to it and have Tilton thank me over the Cogle for certifying to prices. Some one pointed this out to me formerly in the former accounts for payment. As the Fraser should, and do, pay much if it can not one might to [illegible] Our one fear will be quite open to [illegible] Tilton and to a little more publication

You will also see more particulars as to where they (Mr Inkes) were conveyed by team others.

Mark is the distance from Hatchery to [illegible] from Mr Inkes to road.

We have more trouble with fish eggs than we have

July 2nd 91

John Tilton, Esq.,

J. J. Foster
Secretary

Ottawa 2nd July 91

July 11th 88

John Tilton, Esq.
Deputy Minister of Fisheries
Ottawa

Sir,

I beg to forward for your information a schedule showing where the salmon fry from the Tadoussac Hatchery have been planted this spring.

Rivr a Mars.	Grand Bay	100.000
" St Marguerite	N.W. Branch	150.000
" "	S.W. "	50.000
" St. Jean		200.000
" St. Ann	Mouth of the Big Main	15.000
Mowats Lake	discharging into Saguenay river	250.000
Hatchery Lake	" " "	25.000
	Total	850.000

"50.000 fry intended for the Petit Saguenay River were placed in Mowats Lake, on account of the great heat during the third week of June. Fearing a loss, as a few were dying in the troughs, I had them removed to Mowats Lake. it being the nearest point where they could be safely planted".

July 20 58

Mr Alex Mercati
L.C. Campbellton

Dear Sir

In answering your
note sent me of date of 2d Inst I must
beleive the fortune for Intoxication must
for Conviction - No bill can have been sent
for payment to Assizes.

Your own account has certainly
stated charged for Commencing a warrant
case of $10 - as this is a new description
from any Account ever sent in, it will
be necessary for an explicit explanation as
neither the Dft ever the Court Office will allow
such a item in future Accounts -

With Regard to Nicholsons Account
I send enclosed which must be settled
on the 13th 14th of July Mr Nicholson charges the Dft
$20 for bringing Jury - Now it is an overcharge
as upon the Court being he was paid $20
by Couples for bringing them down the Court
Clerk receipt Feels and forward to
above -

I am Your Obedt
Lieut Governor
Gloucester

Dear Sir Letter

941

May 17 18

Dear Mr Taylor

I wish you or Mr Abernethy here or could write to you more than perhaps myself respecting obtaining by Petition for the Lands for the Heirs & Devisees of Butler as that is doing by Senator Sevier & the Tennessee Delegation, particularly as necessary & as soon as possible to get a party there - I have received no answer from you as yet, except as above is passing along quickly I perceive, I have not as yet written a formal application to the Executive or yourself for the reason that under you could first

Yours Sincerely & Affectionate
it would be unkind to apply in a formal manner - If you think it best I will at once send my formal application & the depositions also write the Executive that Butler & Grant Lands ought not to be sold unless you think it best for me to do so - & should you think Executive require further influence, then you can prevail on Gov. the Executive to write a letter to the Executive Council & some other friend to speak to the Executive - If I do a letter from my brother a day or two ago, and also would from my brother then I have had for several years, nothing to prevent if I had made up my mind to

my Brother would felt more
of the friend of your kind, and
they have also wrote by your
with the Enclosure—

Pray let the Bearer
have it and if Mrs Hewitt
recovered pd the Money I
ask from the Depth, desire
at once abandon me
account my Brother
demies any old funds.

Hope you and
Mrs Fillon are quite well

I am your
Ever Friend
Lucy Inchbald

Abstract

Peter Sullivan 12¾ Acres
Alfred Davis

Newcastle
May 2. 17

Mr Richard Peake
Hanover

I am in receipt of your
favour dated 30th April & contents
Mr Cannon & keep his half of the
division fence on South half
of Lot No [illegible] as desired &
in addition
I send you a check for
£30.0.0 for Lot 9 which I
place to your credit as agreed
I find by measurement
that the North Field on the Lot you
occupy contains a triple over 27 acres,
and that the land is only 24 rods wide
instead of 20 rods, thus making an
difference of 2¾ acres more than
you have been paying for

Yours &c
Thos Sullivan
